Work Carried Out By	Claudia Polindara – Lead auditor Laura García -Auditor Víctor Nieto - Technical review
Summary	
ICONTEC was contracted by MEDIAMOS F&M S.A.S. company, with the objective to realize the validation of the REDD+ Project Resguardo Indígena Unificado de la Selva de Matavén (RIU-SM) according to the Requirements and Rules of Standard CCB v3, included the Gold Level Criteria in Climate Change Adaptation Benefits (GL1), Exceptional Community Benefits (GL2) and Exceptional Biodiversity Benefits (GL3). As stated by the information presented by the proponents, the project is based on the Strategic Alliance Agreement between ACATISEMA and MEDIAMOS and aims to develop a participative process to achieve the establishment of an integrated management system of forests and lands of the <i>Resguardo Indígena Unificado - Selva de Matavén</i> (RIU-SM). The REDD+ Project RIU-SM is developed in the <i>Resguardo Indígena Unificado - Selva de Matavén</i> (RIU-SM), which is located at the east of the Colombian Orinoco high plain, south-eastern of the Vichada Department, municipal jurisdiction of Cumaribo.	
The Project Area (PA) contains 1,150,212has, furthermore, the project spatial boundary contains 486,211has corresponding to the Leakage Belt (LB), 1,444,805 Reference Region for Projecting Deforestation Rate (RRD), and 2,028,439ha related to Reference Region for Projecting Location of Deforestation or Project Zone (RRL). The REDD+ Project RIU-SM activities are aimed at the protection, conservation, and recovery of the natural forests of the Selva de Matavén, in a Project Area of 1,150,212 ha., in order to avoid the GHG emission of 108,670,562 tCO₂ in the crediting period (2013 – 2042).	
The project description comprises the activities that support the compliance of CCB rulers and requirements by topics of Climate, Community, and Biodiversity with the respective criteria (Gold Level Criteria), moreover project benefits, project implementation schedule, legal status, and property rights. The project was validated under the VCS Program on 10th June 2017, and its first verification was on 10th June 2017 in the crediting period for 2013-2014-2015.	
The purpose of this Validation involves the assessment of the project description, regarding the project conformance to Standard CCB version 3.1 rules and the applied methodology, including the procedure for the demonstration of additionality and materiality, during the project lifetime, in this case, 30 years. During the validation process, the ICONTEC team identified 17 findings (4 Clarification Request, 12 Corrective Action Request, 1 Future Action Request) which were successfully addressed by the project proponent, about the FAR must be reviewed in subsequent audits. In addition, is important clarify that the project presents an overlap with the REM Visión Amazonía Program, and the project proponents have been carrying out actions to solve this overlap, requesting the exclusion of the project area from the program area in compliance with Resolution 1447/2018. The government agencies of the Vision Amazonia Program have not responded to the date of the preparation of this report.	
The method of validation involves documental review, on-site visit, interviews with relevant personnel, the consultation of secondary information sources, findings statements, feedback with the project owner, and elaborate of the final report. No CARs that could lead to a material discrepancy between the project and the project description were identified. The document review, inspection visit, and interviews conducted allowed ICONTEC to obtain ample evidence to evaluate the validation criteria and to	

determine that the project is properly implemented with the requirements of the CCB Standard. Likewise, reductions were correctly calculated, based on the applied methodology.

To conclude, ICONTEC confirms that the project meets the criteria and requirements of the CCB Standard and is subject to verification by the CCBA.

1 INTRODUCTION

1.1 Objective

ICONTEC has been contracted by MEDIAMOS F&M S.A.S. company, with the objective to realize the validation the REDD+ Project Resguardo Indígena Unificado de la Selva de Matavén (RIU-SM) according to the CCB Requirements and Rules V.3, included the Gold Level Criteria in Climate Change Adaptation Benefits (GL1), Exceptional Community Benefits (GL2) and Exceptional Biodiversity Benefits (GL3).

The purpose of this Validation involves the assessment of the project description, regarding the project conformance to Standard CCB version 3.1 rules and the applied methodology, including the procedure for the demonstration of additionality and materiality, during the project lifetime, in this case, 30 years.

1.2 Scope and Criteria

The validation scope is given as an independent and objective review of the project design, the project's baseline study and monitoring plan which is included in the CCB PD and other relevant supporting documents.

The scope of work covered in the validation is describe below:

- To validate whether the project activity meets the requirements of CCB Standard V3.1 and CCB program rules V3.1.
- To confirm that the information presented are completed, consistent, transparent, and free of omission or material error
- Background investigation and follow up interviews
- Issuance of draft validation report with CARs, CLs and FAR
- Final validation opinion

ICONTEC has performed validation based on a risk-based approach focusing mainly on the significant risks to meet the qualification criteria and the ability to generate Verified Carbon Units (VCUs).

The validation is not meant to provide any consulting towards the client. However, stated requests for clarifications and/or corrective actions may provide input for the improvement of the project design.

1.3 Summary Description of the Project

The project is based on the Strategic Alliance Agreement between ACATISEMA and MEDIAMOS and aims to develop a participative process to achieve the establishment of an integrated management system of forests and lands of the Resguardo Indígena Unificado - Selva de Matavén

(RIU-SM). The REDD+ Project RIU-SM is developed in the Resguardo Indígena Unificado - Selva de Matavén (RIU-SM), which is located at the east of the Colombian Orinoco high plain, south-eastern of the Vichada Department, municipal jurisdiction of Cumaribo.

The Project Area (PA) contains 1,150,212ha, furthermore, the project spatial boundary contains 486,211ha corresponding to the Leakage Belt (LB), 1,444,805 Reference Region for Projecting Deforestation Rate (RRD), and 2,028,439ha related to Reference Region for Projecting Location of Deforestation or Project Zone (RRL). The REDD+ Project RIU-SM activities are aimed at the protection, conservation, and recovery of the natural forests of the Selva de Matavén, in a Project Area of 1,150,212 ha., in order to avoid the GHG emission of 108,670,562 tCO₂ in the crediting period (2018 – 2019).

Project Proponents:

- ACATISEMA. Asociación de Cabildos y Autoridades Tradicionales Indígenas de la Selva de Matavén

– MEDIAMOS F&M S.A.S. Contact name: Francisco A. Quiroga Zea, Project Director. Email address: mediamosfym@hotmail.com Phone number: +57 3206878984

Baseline and monitoring methodology: VT0001 Tool for the Demonstration and Assessment of Additional in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities, Version 3, and VM0007 methodology module BL-UP “VMD0007 Estimation of baseline carbon stock changes and greenhouse gas emissions from unplanned deforestation”, version 3.0.

Project crediting period: 30 years

Crediting period start date: 01st January 2013

Crediting period end date: 31st December 2042

2 VALIDATION PROCESS

2.1 Audit Team Composition (*Rules 4.3.1*)

The validation team consist of the personnel described in Table 1

Table 1 Validation Team

Name	Role/Qualification	Developed phase
Claudia Polindara	Lead Auditor	Document review. Site visit, interviews. Issuance of findings. Final Report
Laura García	Auditor	

The auditor team is qualified in accordance with ICONTEC qualification scheme for CCB validation. The lead auditor is a Colombian forestry engineer, expert in Environmental Legal, and account with expertise in forestry project.

2.2 Method and Criteria

Validation was conducted using ICONTEC procedures in line with the requirements specified in the CCB Standard V3.1 and the applied methodology “VM0007 methodology module BL-UP “VMD0007 Estimation of baseline carbon stock changes and greenhouse gas emissions from unplanned deforestation”, version 3.0. Sectorial scope(s): 14” and its associated tools as well as applying standard auditing techniques. During the audit process, the Project areas were visited, this audit was not remote.

The validation process is undertaken by validation team that involves the following:

- Documents review and evidence submitted by the project proponent under the reference program rules CCB.
- Undertaking site visit, interview or interactions with the representative of the project proponent
- Reporting audit findings with respect to clarifications and corrections and the closure of the findings, as appropriate
- Preparing a draft validation report
- Resolution of outstanding issues and the issuance of final validation report and opinion

The project area and site inspections were completed to confirm the project boundaries, verify the baseline, and verify the forest and non-forest areas, interviews were conducted with the different stakeholders. The audit team visited the selected plots by biome.

2.3 Document Review

The project Description submitted by MEDIAMOS & ACATISEMA and additional background documents related to the project design and baseline as well as scientific literature and country law were reviewed in the light of rules CCB Standards V3.1.

The reviewed documents are set out below:

2.4 Interviews

The interviews were carried out with different actors in the visit to the project zone from 14/09/2021 to 24/09/2021. The audit team made the interviews to benefit the community of the project, environmental entities, and local entities.

The audit team was distributed in two teams, by geographic area (Cumaribo and Inírida).

TEAM INIRIDA:

The Inírida team started on site on September 15, 2021, and conducted interviews with the project co-director, Alejandro Camacho (ACATISEMA – Piaroa ethnic), and he demonstrated that he had knowledge about the project and its start date. Likewise, the audit team interviewed to Luz Adriana Torres, she oversees reactivating the cooperative and ensuring that all MATAVEN REDD projects can be articulated within it. On September 16, 2021, interviews were conducted in Cumaral with seven people, including an indigenous guard, an ex-captain of the community, and the current

captain. Also, the audit team visited the agroforest project, which has benefited several families, especially women. In general, the interviewees demonstrated knowledge of the project's goals and benefits.

Between the 17th and 20th, the communities of Manajure, San Rafael, Pueblo Escondido, Sarrapia, and Urbana were interviewed. They interviewed vulnerable community members (women, elderly population), different leaders, all of whom belonged to the six ethnic groups. In addition, interviews were conducted with members of the academic community (Professors).

The interviews are consequent to the information presented by the project proponents. But it is also coincidental that the community required major communication about the project's implementation. Likewise, the women demonstrated interest in projects that benefited directly, and they needed support for the strengthening of women's coordination.

At a meeting on September 21, 2021, in the ACATISEMA office located in Inirida, the audit team interviewed the ACATISEMA employees and verified their functions. Also, the audit team interviewed the local entity representatives: the department government and the ambiental authority (CDA). The meeting concluded that the project proponents must be well articulated with the entities, with the objective of joining efforts to support the communities and the preservation of their natural resources.

The audit team evidenced that, in general, the community is agreeing with the project and the community identified the project intangible and tangible benefits. It is also common for the people to feel that the project promotes the governance of ethnic peoples and that, at the same time, they receive benefits they have been waiting for from the state (government), but never had arrived.

TEAM CUMARIBO

The first meeting of the project for the part that is in Cumaribo, began on 16/09/2021, with different representatives of the municipal mayor's office, the governor's office, AcatiseMA and Mediamos, where, at the ACATISEMA facilities, it was held A brief intervention and a little of the history of the project was told and how thanks to it it has been possible to reach the community with different activities (see attached document of the attendance lists).

Interviews were conducted with the people who work within ACATISEMA, and questions about the general knowledge of the project were asked, mainly because the resources they have for the operation of the Association come from the resources of the REDD + project, the workers are all part of the area, and they belong to one of the 6 ethnic groups that the project has. The interviews carried out within the facilities were with officials in financial matters, education, hiring, productive projects and accompaniment to the communities, teachers, indigenous guard coordinator, health personnel, among others.

In general, ACATISEMA employees are aware of the basic conditions of the project, of the environmental safeguards, of the established lines of action, of the projects and activities that are being carried out within the framework of the REDD + project, they know the limits of the project and the immersed communities, know first-hand the needs and benefits that the project has brought since the VCS standard began, since without this, ACATISEMA would not exist structurally, which generated additional work and specialized labor for comply with all lines of work

On September 17, the community of Matsuldani was visited, where we were accompanied by several captains of neighboring communities and leaders of the communities, and who is their chief, Machulu, where a total knowledge of the project was evidenced, in which they have carried out different contributions, to improve the quality of life of the communities that are part of the project, and to meet the needs that arise there.

It is important to highlight the joint work that has been carried out between the communities, ACATISEMA and MEDIAMOS, where all parties have worked hand in hand, to be able to demonstrate the results in the field, of the training that has been carried out with the implementation of the indigenous guard, the management of the lands for the conucos, the care of the morichales and the importance of planting native species.

On September 18, the community of Urba - morichalito was visited, where some of the activities that have improved communication and routes between communities for daily activities, such as the construction of bridges over secondary rivers, were evidenced, grating machines for the preparation of basic foods, among others.

Between September 19 and 20, interviews were conducted with different community stakeholders, including some women, where the knowledge they have of the REDD + project was evidenced, and the activities that have been proposed within its framework, it is important It should be noted that although it is true that several activities have been carried out, some are still unfinished, where several contracts are still open at the date of the audit, and are in implementation, to fully comply.

The captains have met annually with the different parties, and the zonal coordinators to give the most complete information possible, however, being such a broad project, it is difficult to reach all the people, but improvements will be made in the communication of the results of the work to reach all the project sites.

ICONTEC audited the procedures to determine project boundary, baseline scenarios, land use scenario, the additionality, land eligibility as well as the legal status and property rights, including leakage, the safeguards, and the net positive impacts, furthermore program requirements and to determine if the Project Description is in accordance with the applied methodology.

2.5 Site Inspections

The objective of the on-site inspections performed were to:

- Ensure that the geographic area of the project, as reported in the Project Description, and the accompanying Shape File, is in conformance with the CCB program and methodology requirements.
- In fulfillment of the above objectives, the auditor performed an on-site inspection of the project area from 14/09/2021 to 24/09/2021.
- During field reconnaissance, GPS waypoints were collected at boundaries and other significant features including locations where photos were taken and control points.

- An assessment of the implementation and operation of the proposed CCB project through visual inspection and through the interviews with staff and the community.

The GIS was reviewed, in this sense, the project area and the site inspections were completed to confirm the project. Site inspections were also conducted to evaluate the consistency and the project site were confirmed with GPS.

2.6 Public Comments (Rules 4.6)

The project PDD was posted to the VERRA website for the formal 30- day public comment period from 07/07/2021 to 06/08/2021. No comments received during the commenting period, as evident from the VERRA web interface.

2.7 Resolution of Findings

The findings detected by ICONTEC (4 CL, 12 CAR, 1 FAR) were presented to the person in charge of the project and were resolved through communications or meetings between the two parties.

Appendix 1 of this report provides details of the process carried out by the audit team during the validation.

All CAR/CLs have been resolved by the project proponents through additional supporting evidence and appropriate changes to PD v1.3 /3/.

2.8 Forward Action Requests

FAR 1 is listed and described in Appendix 1 of this report. This FAR must be reviewed in subsequent audits.

3 VALIDATION FINDINGS

3.1 Summary of Project Benefits

Project benefits are summarized in table 1.1. of the PD V1.3 /3/, also, in table 1.2. the project proponents present the Standardized Benefit Metrics, the information is appropriately according to each section of the PD and provided in the body of document.

The climate benefits aim to assist mitigation of climate change with total avoided emissions of 108,670,562 tCO₂e, in addition to reducing forest loss of 253,648 ha., in the Project life cycle. This information was confirmed by the audit team in the PDD_VCS.V7 /26.22/, information previously validated under the VCS standard.

The community benefits presented by project proponent is based upon reduction of the aspects of vulnerability, sustainable production system and alternative economy, and other benefits, which it specified in the well-being benefits (Sections 2.1.8; 3; 4 and 5 of the PD V1.3 /3/), the VVB validated this information through the inspection visit, the evidence in the annexes and the interviews with the indigen community.

The biodiversity conservation benefits focused in protect the species in categories Red List of Threatened Species – IUCN, and endemic species of the project zone. The information was validated by the ICONTEC across to information of the PD V1.3 /3/ and the plots sampled during the inspection visit.

3.2 General

3.2.1 Project Proponent (G1.1)

The project proponents are:

- ACATISEMA. Asociación de Cabildos y Autoridades Tradicionales Indígenas de la Selva de Matavén:
 - Current General Coordinator: Albeiro Beltrán
 - Current General Secretary: Tirso Beltrán
 - Co-director of the Project: Alejandro Camacho
 - Assistant to the Co-director Zone 1 and Zone 2: Omar Briceño
- MEDIAMOS F&M S.A.S:
 - Project Director: Francisco A. Quiroga.
 - Administrative Coordinator: Monica Barragán

Section 2.1.1. of the PD V1.3 /3/ includes the specification of the roles and responsibilities of the project proponents, also incorporate the organizational structure of each proponent. ICONTEC confirmed the information above in the inspection visit, also, in addition, the reviewed annexes corresponding to meets, contracts, and performance reports of the proponents' team.

In conclusion, the audit team was able to confirm that the responsibilities and roles are clearly described and evidenced that the communities in the project zone are represented through community coordinators' boards. Moreover, the audit team reviewed the community management agreements and confirmed that the project proponents have complied with them.

3.2.2 Project Objectives (G1.2)

According to the PD v1.2 /3/ the projects climate, community and biodiversity objectives are:

- "Mitigate threats to conservation, protection and recovery of RIU-SM's forests and lands, through the implementation of actions to ensure the sustainability, reducing Greenhouse Gases (GHG) emissions (particularly by avoiding deforestation due several factors), to contribute to the mitigation of climate change and generate VCUs to claim compensations for environmental services.

- Improve in the life quality of the RIU-SM's communities, community groups (women / men, indigenous authorities, shamans, traditional doctors, healers, shepherds of 6 ethnic groups of the territory: Cubeo, Curripaco, Piapoco, Piaroa, Puinave, and Sikuani) and some of other stakeholders (teachers, settlers) by protection of the High Conservation Values (HCVs) related to Community component, which generate them net positive impacts.
- Improve in the RIU-SM's biodiversity resources through the knowledge of the natural history of species and of the natural capital conservation agreements, the control and surveillance of the territory and by protection of the High Conservation Values (HCVs) related to Biodiversity component, generate them net positive impacts.
- Generate Climate, Community and Biodiversity exceptional benefits through awareness-raising about the theme of climate change, its effects on the territory and mitigation and adaptation to this phenomenon."

The above information was checked through the documentary review and the inspection visit. Consequently, the audit team considers that the objectives are accurate, complete, and provide an understanding of the nature of the project.

3.2.3 Physical Parameters (G1.3)

The project is located at the east of the Colombian Orinoco high plain, south-eastern of the Vichada Department, municipal jurisdiction of Cumaribo. Section 2.1.3 of the PD v1.3 /3/ includes the project location, geographic boundaries, topography, physiography, geomorphology, soils, climate information, and description of vegetation and fauna.

The physical parameters were confirmed by the audit team through the documentary review, as well as the Annex17_GIS /26.16/ and the inspection visit. Likewise, the audit team reviewed the secondary data of some sources referenced in the PD, such as IDEAM and IGAC, therefore it is confirmed that the information presented in the PD is adequate.

3.2.4 Social Parameters (G1.3)

The social parameters are described in section 2.1.4 of the PD v1.2 /3/. The project zone is distributed in zones (5) and several sectors (16). This information was confirmed while the inspection visit and the documentary review, with emphasis on Annex 5-1_resolucion_37_2003 /11/ and Annexes PDD-VCS_referenced_in_CCB /17/.

Accordingly, ICONTEC confirms that the information about social parameters is consistent with the social conditions in the project area.

3.2.5 Project Zone Map (G1.4-7, G1.13, CM1.2, B1.2)

Section 2.1.5 of the PD includes the project zone map in map 8, also the boundaries map that complements the project spatial information, the information was contrasted with the GIS information /17.13/, and the inspection visit.

The VVB confirms that the information provided by the project proponents on the project zone map is consistent with the PD and complies with the CCB standard rulers.

3.2.6 Stakeholder Identification (G1.5)

Section 2.1.6 of the PD /3/ identified 6 indigenous ethnicities (Cubeo, Curripaco, Piapoco, Piaroa, Puinave, and Sikuni). Due to CAR 2 of the preliminary findings, the project proponents included other stakeholders, which participate directly and indirectly in the project. The project proponent distributed the stakeholders by following topic: Main stakeholders, Community groups another stakeholder.

ICONTEC validated the information established on PD through documental evidence. Furthermore, during the onsite inspection, the VVB conducted interviews with six indigenous ethnicities and official entities: the Corporation for the Sustainable Development of the North and East of the Amazon (CDA) and the National Learning Service (SENA); representatives of NGOs such as the RAMSAR Roundtable and the Association of Guaviare Indigenous Authorities (ASOCRIGUA); the Mayor's Office of Cumaribo and the Government of the Department of Vichada.

ICONTEC concluded that the project proponents identified the stakeholders adequately.

3.2.7 Stakeholder Descriptions (G1.6, G1.13)

Section 2.1.7 of the PD /3/ contains the description of the stakeholders and includes the relevance to project activities (table 10 of the PD). The project proponent distributed the stakeholders by the following subjects: Main stakeholders, Community groups, and other stakeholders.

ICONTEC validated across interviews on-site visit that the description of stakeholders in PD is satisfactory.

3.2.8 Project Activities and Theory of Change (G1.8)

The project proponents develop the theory of change from the diagnosis of the problem and the specify of the problem for the Climate, Community, and Biodiversity components. Likewise, the PD showed the distinction de among strategics, objectives, outputs, outcomes, and impacts of the project. Table 11 of the PD /3/ includes the summary of the process and results of the applicability of change theory to REDD+ Project RIU-SM activities.

Considering the above, the auditor team took the following steps to validate the theory of change to project activities with climate, community and biodiversity benefits identified by the project:

- Assessment of the adequate applicability of the theory of change methodology and coherency with the PD described information.
- Substantiate through interviews with community members, the result of the consultation process, and the consistency with expectations related to PD.
- Development this topic in the discussions on-site visit, to verify the tools used to inform the climate, community, and biodiversity project goals.

Accordingly, ICONTEC concludes that the PD theory of change is accurate, comprehensive, and provides an understanding of the nature of the project as regards the achievement of its climate, community, and biodiversity objectives.

3.2.9 Climate, Biodiversity and Community Benefits Assessment Period (G1.9)

The project crediting period is 30 years, this crediting period is in full compliance with the requirements of the VCS Standard for AFOLU projects (previously validated by ICONTEC).

The audit team reviewed the relevant sections of the PD and confirmed that the identified indicators shall enable measuring progress towards desired project activity outcomes and impacts from slated project activities and strategies.

Through on-site interviews and the review of the project monitoring for climate variables, the audit team confirmed that the processes are reliable and enough and designed to assessment monitor deforestation over the crediting period.

3.2.10 Implementation Schedule (G1.9)

The audit team reviewed section 2.1.11 of the PD /3/ and confirmed that the document provides a project implementation schedule according to required. The following milestones were evaluated by the audit team:

- Start and End Dates for the GHG accounting period: The information was confirmed through the PDD under the VCS program. Validated on December 6th, 2016 /26/.
- Monitoring schedule / verification schedule: The information was confirmed through the Joint Validation & Verification Report – June 10th, 2017 /26/
- Implementation 2013-2017: The project proponents described the YPO /5/ in the interviews conducted during the site visit. The audit confirmed that the YPO has complied with the implementation.

ICONTEC agrees that the implementation schedule is congruent with the activities to date.

3.2.11 Risks to the Project (G1.10)

In the CAR 2 of the findings preliminary it considered that the project proponent should include the external risk for updating or change of national rules or policies, and opposition to the project by external stakeholders. In Section 2.5.7 of the PD, the proponent project the considerations related to it. In addition, section 2.1.12 indicates the methodology applied to risks on climate benefits, including the risk for Non-Permanence (Annex 23 of validated PDD – VCS /26.20/).

Moreover, table 13 identify the possible risks, their impacts, and mitigate risk, according to CCB standards rulers.

Through the visit on-site and interviews with project personnel, the audit team considers that the mitigation measures are appropriate.

3.2.12 Benefit Permanence (G1.11)

The project has a legal contractual agreement to preserve the project's permanence. The project proponents include the Strategic Alliance Agreement ACATISEMA-MEDIAMOS /20/, which describes the activities that can guarantee the climate, community, and biodiversity benefits.

To validate the information to the climate benefits, the audit team reviewed the calculation validated previously through the VCS standard. Moreover, through the observations and interviews on-site with the ethnic communities (Appendix 2), ICONTEC confirmed that the project proponents are working together in the implementation of the project, also have the participation of the entire community, and are organized to meet the objectives of climate, community, and biodiversity.

3.2.13 Financial Sustainability (G1.12)

The financial sustainability is previously presented in the validated PDD – VCS /26.22/, Section 2.5.1. The audit team reviewed the assumptions and the financial mechanisms adopted for the implementation of the project and to achieve the climate, community, and biodiversity benefits of the project.

ICONTEC concludes that the projected cash flow is adequate to support the implementation of the project activities to comply with the aims of the project.

3.2.14 Eligibility Criteria for Grouped Projects (G1.14)

Not applicable. The REDD+ Project RIU-SM is not a grouped project.

3.2.15 Scalability Limits for the Grouped Projects (G1.15)

Not applicable. The REDD+ Project RIU-SM is not a grouped project.

3.2.16 Risk Mitigation Approach for Grouped Projects (G1.15)

Not applicable. The REDD+ Project RIU-SM is not a grouped project.

3.2.17 Land-Use Scenarios without the Project (G2.1)

Through documentary review and interviews in on-site visit, the auditor team concludes the following regarding the range of potential land-use scenarios and the associated drivers of land-use changes most likely to occur within the project zone in the absence of the project:

- Deforestation to produce food without proper soil management and impacts from threats to the territory.

According to the documentary evidence used to determine the scenarios without the project, these are correctly quoted and interpreted in the PD and PD_VCS (previously validated).

3.2.18 Most-Likely Scenario Justification (G2.1)

The most likely land-use scenario described in sections of the PD and the PD_VCS mainly corresponds to the implementation of roads that generate the immigration of people, some of them perform harvesting and burning forests for agricultural and livestock activities on a small scale.

Considering on-site observation, interviews, and documentary review, the auditor team confirms that the project activities to date can be achieved, therefore and the most-likely land-use scenario in absence of the project, as described in the PD are adequately justified.

3.2.19 Additionality (G2.2)

The project proponents describe in section 2.2.3 of the PD how Climate, Community and Biodiversity project benefits would not occur in the absence of the project, and by crosschecking documentary review and interviews in on-site visit, the audit team can confirm that the climate, community, and biodiversity aims are positive benefits to the project zone, therefore, the additionality is adequate justified.

Moreover, the project proponents identify existing laws, regulations, and governance arrangements, or lack of these, would likely affect land use in the absence of the project, as well as Project activities, would not have been implemented under the without-project scenario due to significant financial, technological, institutional, or capacity barriers.

In consequence, ICONTEC concludes that the justification for the additionality of the project activities, as provided in the PD and PD_VCS /26.22/, is appropriate and in conformance with CCB requirements.

3.3 Stakeholder Engagement

3.3.1 Stakeholder Access to Project Documents (G3.1)

During the on-site observation and interviews with the community and ACASITEMA personnel, the auditor confirms that the project proponents have complete tools for disseminating the project to the communities. In addition, the proponents of the project have digital and physical copies of the information in the respective offices.

In the inspection visit, several consultation meetings were held with the community and project personnel to explain the aims of the project and identify its potential impacts. The process also included questions about community perceptions of the project to be implemented. During the on-site interviews, topics such as climate change, the voluntary carbon market, and the general concepts of the project were addressed in simple language so that all participants could understand it, the project proponents used visual tools with the languages of the six ethnics.

The auditor confirmed that the project's stakeholder engagement plans, and practices meet the requirements of G3.1. To meet the requirement, the project demonstrated that it made project documentation accessible to communities and other stakeholders.

3.3.2 Community Costs, Risks and Benefits (G3.2)

All through on-site, the audit team held interviews with community members among all ethnic groups across the project zone and heard first-hand accounts regarding the project personnel's communication and engagement with the project communities regarding the project.

The audit team evaluated evidence from community meetings to discuss the potential benefits and risks of the project and could confirm that the project proponents discussed with the community this information in several meetings and workshops.

During the interviews, the audit team confirmed that the potential costs, risks, and benefits were discussed with communities, however, is required to better this communication with some communities (FAR1).

The project proponents identified that the main expected risk would be related to the non-participation and commitment of the communities, which was confirmed by the audit team across several interviews with the community, for that reason, the project should avoid this risk through the action plan (FAR 1).

The audit team concludes that the information was provided in a form that could be understood by the communities.

3.3.3 Information to Stakeholders on Validation and Verification Process (G3.3)

During the local consultation, all participants, workers, and communities were informed about the validation and registration process. To validate this information, the auditor reviewed and discussed the content of the local consultations and meetings and confirmed that the CCB validation process was discussed with community members in different meetings /17.1/. ICONTEC can conclude that the measures taken, and the communication methods used to inform the communities are under the requirement.

3.3.4 Site Visit Information and Opportunities to Communicate with Auditor (G3.3)

To determine whether communities and other stakeholders have been informed of the auditor's site visit in a timely manner before it occurs, and how direct and independent communication between communities and other stakeholders or their representatives and the auditor will be facilitated, the auditor conducted interviews with community members throughout the project area.

The audit team confirmed that the community was informed that the meetings would be held with the auditor, also, the project proponents promoted direct and independent communication with the auditor team.

In addition, project proponents provided the required documentation which made it possible to adequately assess the audit process according to rulers CCB.

3.3.5 Stakeholder Consultations (G3.4)

To validate this section, the audit team took following actions:

The audit team reviewed that the PD included a detailed description of the stakeholder consultation process.

By documentary review, the audit team confirmed the level of outreach that was performed by the project personnel (meets, photographed, visual tools).

During on-site, the audit team interviewed project personnel and the community, which can be confirmed that the consultation process was implemented as described in the PD.

The interviews with community captains or zonal coordinators confirmed that the consultation process is current, and all participating communities are represented.

Summary, the information included in the PD is satisfactory.

3.3.6 Stakeholder Consultation Channels (G3.5)

The reviewed information by the auditor team and on-site observations can be confirmed that the ACATISEMA is organized under the coordinator committee and cabildos board, which allows participation existing all ethnic community representatives of the project. However, is required that the project applies more effective mechanics and tools to better these consultation channels during the project development (FAR1).

3.3.7 Stakeholder Participation in Decision-Making and Implementation (G3.6)

The project proponent: ACATISEMA has an organizational structure, which consists of captains and cabildos by sectors, this kind of organization search the compliance for effective participation in decision making and project implementation. The audit team confirmed that the gender participation strategies are being executed to the indigen community.

In this regard, to validate this information, the auditor reviewed and discussed the content of the local consultations and meetings and confirmed that the process to enable effective participation in a culturally appropriate and gender-sensitive manner with all communities was adequate.

ICONTEC can conclude that the communication methods used to ensure stakeholder participation in decision-making and implementation are in accordance with the requirement.

3.3.8 Anti-Discrimination Assurance (G3.7)

The audit team confirmed that the project proponents adequately describe the measures necessary and taken to ensure that the project proponent and all other entities involved in the project design and implementation are not involved or complicit in any form of discrimination or sexual harassment regarding the project.

During the on-site interviews auditor team carried out to different stakeholders, it concludes indicated that the project has the elements to guarantee that discrimination has not occurred in the territory, in addition, this project is sustained under life plans, which contains actions to include all ethnics community without any discrimination. In this way, it is evidenced that community

participation in the project has been inclusive, according to individual and independent capacities of gender, cultural identity, and religion.

3.3.9 Feedback and Grievance Redress Procedure (G3.8)

To validate the feedback and grievance redress procedure, the audit team reviewed the documentary information, and interviews on-site, according to the evidence, ICONTEC confirmed that there are adequate mechanisms to request reclamations to the community.

In summary, the audit team agrees with the procedure described by the project proponents in section 2.3.12 of the PD /3/ and it is considered according to the requirements of G3.8 of CCB Standards.

3.3.10 Worker Training (G3.9)

Section 2.3.14 of the PD /3/, describes adequately the process of worker training for those employed. The audit team confirmed that the MEDIAMOS S.A. supports ACATISEMA with professional experts on distinct topics that are developed around the project.

Through on-site, the audit team interviewed professional workers who support technically ACATISEMA personnel and identified that the project proponents have qualified personnel for different activities required for the project implementation.

Consequently, ICONTEC confirms that the project proponents comply with the orientation and training requirements of G3.9 and are willing to include any other relevant resources needed.

3.3.11 Community Employment Opportunities (G3.10)

To validate the information about community employment opportunities, the audit team carried out the interviews on-site and identified that the community actively participates in the jobs generated by the project, likewise, the audit team can confirm that exists an education program with aims to generate new expert's professionals since community itself.

3.3.12 Relevant Laws and Regulations Related to Worker's Rights (G3.11)

Using documentary evidence (staff contracts), the audit team assessed the relevance and compliance to relevant laws and regulations related to Worker's Rights, and the project is considered to be acting appropriately in this area. Likewise, the audit team conducted interviews with the project workers.

3.3.13 Occupational Safety Assessment (G3.12)

Section 2.3.17 of the PD includes the description of assessing situations and occupations that might arise through the implementation of the project and pose a substantial risk to worker safety. During the interviews with the ethnic community, the audit team confirms the community workers' knowledge of the procedure described in PD /3/.

ICONTEC considers that the procedure is according to the requirements of G3.12 of CCB Standards.

3.3.14 Project Governance Structures (G4.1)

Section 2.1.1. and 2.4.1 of the PD V1.3 /3/ includes the specification of the roles and responsibilities of the project proponents, also incorporate the organizational structure of each proponent.

ICONTEC confirmed the information above in the inspection visit, also, in addition, the reviewed annexes corresponding to meets, contracts, and performance reports of the proponents' team.

In conclusion, the audit team was able to confirm that the responsibilities and roles are clearly described and evidenced that the communities in the project zone are represented through community coordinators' boards.

3.3.15 Required Technical Skills (G4.2)

The project proponents describe accurately the concepts and procedures to comply with the requirements of this section. Throughout the PD /3/, it was confirmed the project has the tools to implement the project successfully, including community engagement, biodiversity assessment, and carbon measurement and monitoring skills.

In addition, the audit team carried out the interviews with the project personnel and verified that the workers have the necessary skills per the work to be carried out. Section 3.3.10 and 3.3.11 of this report find complemented information.

3.3.16 Management Team Experience (G4.2)

Table 14, section 2.43 of the PD /3/ contains enough information about the management team. The audit team confirmed that it provides a detailed discussion of the management team experience. The information provided was corroborated through interviews with personnel project during the site visit, also it reviewed the workers curriculum.

In summary, ICONTEC concludes that the information is complete and include sufficient evidence of experience in implementing carbon projects at the scale of this project.

3.3.17 Project Management Partnerships/Team Development (G4.2)

The PP mention various entities to develop the project activities corresponding to production systems, as FEDECACAO. The project proponents showed interest to include the necessary entities o partnerships to meet the goals of the project.

The audit team can confirm that the information is enough and adequate about the management of the partnership, and information concerning future partnerships to be included during the project implementation will have to be verified.

3.3.18 Financial Health of Implementing Organization(s) (G4.3)

The audit team reviewed the assumptions and budget provided by the project proponents, likewise, it solicited all financial information since the start project. The project proponents considered the possibility of a decrease in VCU issuances and included strategies to mitigate this risk in Sections 2.1.14, 2.5.7, and 5.2.2 of the PD/3/.

The financial information was sustained by the project proponents. ICONTEC confirmed that the project can be sustained over the project lifetime by the VCU's commercialization and other activities derived from the same project. Furthermore, ICONTEC believed that the strategies established by the project's proponents in the event of a decrease in VCU were adequate.

3.3.19 Avoidance of Corruption and Other Unethical Behaviour (G4.3)

The audit team took the following steps to validate the assurances provided that the project proponent and any of the other entities involved in project design and implementation are not involved in or are not complicit in any form of corruption:

- Assessment of the financial documents (CAR 1 of the complementary findings), to verify that the total financial information is adequate and transparent.
- Interviews with the community and project personnel about signals o activities that have at any time indicated corruption behavior.
- Interviews with government entities about the knowledge of the project, and questions whether allegations of corruption have been filed.

During audit process ICONTEC confirms that the project is not involved or complicit in any form of corruption.

3.3.20 Commercially Sensitive Information (Rules 3.5.13 – 3.5.14)

Not applicable. No information has been withheld from the PD as commercially sensitive information.

3.3.21 Statutory and Customary Property Rights (G5.1)

The PD presents adequately the map of tenure through GIS information /26.16/ and the respective documentation evidence.

ICONTEC concludes that the project zone corresponds to the eligible project area and has all property rights related.

3.3.22 Recognition of Property Rights (G5.1)

Through reviews documental, and on-site inspection, the audit team achieved verify that the property rights are recognized, respected, and supported.

3.3.23 Free, Prior and Informed Consent (G5.2)

Across the information of the PD, the documented meetings, and legal evidence /16/,/17/,/18/,/19/, /20/, /21/, /22/, the audit team confirmed that the project is carried out in the territory belonging to the ACATISEMA community, and the audit corroborated following:

- The project will not encroach uninvited on private property, community property, or government property.
- Through the interviews on-site, it verified the process by which free, prior, and informed consent has been obtained of those whose property rights are involved by the project.
- Exists the compensation derived from the project for the protection of forests.

In consequence, the project is respecting the property rights of the communities.

3.3.24 Property Rights Protection (G5.3)

The audit team took the following steps to validate that that project activities do not lead to involuntary removal or relocation of property rights holders from their lands or territories, and do not force rights holders to relocate activities important to their culture or livelihood:

- Through interviewed with the indigenous community and project personnel it confirmed that project activities do not lead to involuntary removal or relocation of property rights holders from their lands or territories, on the contrary, the project activities help the community to continue in their territories and benefit from such activities.
- Across the observation e interviews on-site, the audit team corroborated that the project stimulates governance management in the ethnic communities participating in it.

3.3.25 Illegal Activity Identification (G5.4)

In section 2.5.5 of the PD, project proponents identified illegal activities as making timber extraction, mining in rivers, hunting, fishing, and capturing animal species, and the project proposes an indigenous guard presence on the territory to reduce these threats.

During the visit, the audit team interviewed the zone guards and they informed them that no illegal actions had been detected since the establishment of the monitoring mechanism. ICONTEC concludes that illegal activities are well identified and that appropriate measures have been taken.

3.3.26 Ongoing Disputes (G5.5)

The audit team verified that no ongoing disputes existed through interviews held with the 6 ethnic groups and interviews with the following local entities: The Corporation for the Sustainable Development of the North and East of the Amazon-CDA, the Mayor's Office of Cumaribo, and the Government of the Department of Vichada. Likewise, through the legal documents /16/, /17/, /18/, /19/, /20/,/21/, and/22/, the audit team verified enough evidence about the ownership.

ICONTEC corroborated that no ongoing disputes over ownership or resource access use rights were occurring.

3.3.27 National and Local Laws (G5.6)

The project has complied with the national and local laws to date, however, the national government has generated new requirements for REDD projects since Resolution 1447 of 2018, which affects the sustainability and viability of the project MATAVÉN, for that reason, no yet definitive request from the pertinent authorities, and is pending whether the project should make the transition to comply the new national policy.

Another hand, the project complies with the VERRA accepted methodologies, as evidenced by the previous validation and verifications of this project under the VCS standard.

3.3.28 Approvals (G5.7)

Project proponents have achieved recognition and approval through meetings between participants, community consultation, as well as consultation and submission meetings with the traditional authorities (community captains, cabildos boards).

The information was confirmed by the ICONTEC, across the appropriate supporting documents and the interviews on-site.

3.3.29 Right to Claim Benefits (G5.8)

The project is exclusive ownership of Project Proponents. Through the documents reviewed and observations on-site, ICONTEC verified that the project per CCB specifications on project ownership.

3.3.30 Other Programs (G5.9)

ICONTEC concludes that the project is not currently registered under or seeking registration under another GHG program.

3.3.31 Double Counting (G5.9)

The audit team concludes regarding the tradable climate, community, and biodiversity benefits of the project and the procedures for avoidance of double-counting of such benefits, are adequately described in the PD.

3.4 Climate

3.4.1 Without-Project Estimated Greenhouse Gas Emissions (CL1.1)

The project applied methodology VM0007, module BL-UP “VMD0007, and use VCS VT0001 Tool for the Demonstration and Assessment of Additionality in VCS Agriculture, Forestry and Other Land Use (AFOLU) Project Activities, version 3.0.

The project proponents applied all steps according to the methodology, and related the baseline justification and identification, consistent with the following requirements:

- The proposed project activities do not violate any applicable law whether it is or is not enforced. Additional details regarding relevant laws
- The project is not proposing a new baseline methodology but is using VMD0007 Estimation of baseline carbon stock changes and greenhouse gas emissions from unplanned deforestation (BL-UP), Version 3.0, which includes a detailed step by step approach for development of the baseline

The audit team evaluated the information /3/ and documental evidence and considers that the project complies with requirements aforementioned.

ICONTEC evaluated steps applied according to the methodology following:

- Step 1. The proponent projects defined three possible scenarios. According to the currently with the politics and economic conditions, the project proponents defined adequately the scenarios in the baseline.
- Step 2: 1. Selection of the allometric equation for trees:

$$\ln(BA) = a + B1 \ln(D)$$

Where:

BA: biomass of trees in kg

D: average diameter measured at 1.3 m height from the ground from 10cm

a; B1: are constant model

R²: fit of the model

The values of the estimated parameters are according to Forest Type: bh-T:

a: -1.544

B1: 2.37

R²: 0.932

The parameters above was included in accordance to scientific literature.

- 2. Selection of the allometric to estimate the biomass of palms:

$$BA = 6.666 + 12.826 * H_{0,5} * \ln(H)$$

Where;

BA: aboveground dry matter, kg / tree

H: height of the trunk, meters (for palms this is the main stem, excluding the fronds)

Step 3: Estimation carbon reservoir in biomass for each tree. The audit team evaluated the calculations sheets and verified that the information correspond to the validated information on PDD-VCS.

Step 4: Calculate the average carbon in biomass: the project proponents made the stratification through the Biome; this stratification was adequately. ICONTEC evaluated the calculation sheets and verified that the information corresponds to the validated information on PDD-VCS.

The audit team evaluated the parameters and calculated according to the information presented in Annex and PD /26/. ICONTEC considers that the step 2, step 3 and step 4, were developed according to the methodology.

As result, the project presents following estimated GHG emission in the project area under without-project land use scenario:

Table 3 Estimated GHG emission (tCO₂e) in the Project Area, under the without-project land use scenario

Year	Estimated GHG emission (tCO₂e)
Year 1 (2013)	5,151,681
Year 2 (2014)	4,742,981
Year 3 (2015)	5,490,203
Year 4 (2016)	5,499,384
Year 5 (2017)	3,686,093
Year 6 (2018)	4,422,586
Year 7 (2019)	6,500,811
Year 8 (2020)	5,794,823
Year 9 (2021)	4,860,161
Year 10 (2022)	7,094,602
Year 11 (2023)	6,503,210
Year 12 (2024)	5,271,017
Year 13 (2025)	3,391,935
Year 14 (2026)	3,138,361
Year 15 (2027)	4,507,718
Year 16 (2028)	2,396,343
Year 17 (2029)	890,689
Year 18 (2030)	782,845
Year 19 (2031)	4,728,400
Year 20 (2032)	5,854,866
Year 21 (2033)	4,327,030
Year 22 (2034)	6,437,487
Year 23 (2035)	3,143,802
Year 24 (2036)	3,491,406
Year 25 (2037)	4,068,761
Year 26 (2038)	6,595,483
Year 27 (2039)	6,990,250
Year 28 (2040)	6,782,190
Year 29 (2041)	6,100,771
Year 30 (2042)	1,841,874
Total estimated	140,487,762
Total number of crediting years	30
Average Annual	4,682,925

According to the above and the steps evaluated, the estimations without the project were calculated accurately, and ICONTEC agrees with the information presented by the PP. Moreover, this information has already been validated per the VCS standard.

3.4.2 With-Project Estimated Greenhouse Gas Emissions (CL2.1)

The project complies with each applicability condition of the methodology, as justified below:

Table 4 Applicability criteria

Applicability criteria	Project compliance
Methodology VMM 0007	
Land in the project area has qualified as forest (following the definition used by VCS) at least 10 years before the project start date.	ICONTEC reviewed the land eligibility analysis and the supporting information provided to justify the applicability of the project, in the site visit some control points established during the audit team, were reviewed, and concluded that the information provided in PD is correct. Also, this methodology was validated previously under the VCS standard.
If land within the project area is peatland and emissions from the soil carbon pool are deemed significant, the relevant WRC modules must be applied alongside other relevant modules.	Not Applicable. The project activity does not take place on peatlands or organic soils, considering the cartographic analysis of land cover and the pertinent definition of organic soils and information of the PD_VCS /17/.
Module VDM007	
Baseline deforestation and forest degradation in the project area fall within the following category	The information described in PD /3/ and VCS_PD is adequate and sustained correctly. Also, this methodology was validated previously under the VCS standard.
VCS VT0001 Tool	
The proposed project activities do not violate any applicable law whether it is or is not enforced.	The information described in PD /3/ and VCS_PD is adequate and sustained correctly. Also, this methodology was validated previously under the VCS standard.

ICONTEC reviewed the methodology, modules, and tools used to estimate the total GHG emissions expected from land-use activities inside the project area under the with-project land-use scenario, and can confirm that the project proponents address each of these applicability conditions correctly and include coherently the requirements of the project in the PD.

3.4.3 Net Impact (CL2.2)

The Net impact to climate was presented from the Proponent project through the total estimated GHG emission reductions expected during the accounting period of Project. The audit team verified the procedure and methodology. This process was previously validated under VCS standard /26/.

3.4.4 Expected Leakage (CL3.1, 3.3)

The project proponents estimated the leakage belt under the Module VCS – VMD0010 /26.11/. The PD and the calculations contain emissions from non-CO2 sources, which represent a minus of 20% of GHG emissions in the scenario with the Project.

ICONTEC confirms that the information can be recalculated and is adequately justified. This procedure was previously validated under VCS standard /26/.

3.4.5 Leakage Mitigation (CL3.2)

The project proponents identify the Leakage belt to mitigate deforestation, which was validated previously under the VCS standard. In addition, describes throughout the PD, actions as expected community and biodiversity impacts, that search to mitigate leakage.

ICONTEC confirms that the information to mitigate leakage is adequately justified.

3.4.6 Climate Monitoring Plan (CL4.1)

The project proponents include data to verify the level of deforestation within the Project Area, Leakage Belt, and RRL, also includes the description of measurement methods and procedures applied, frequency of monitoring/recording, QA/QC procedures to be applied, the purpose of data, and/or calculation method are specified according to each of the selected Modules of the Methodology.

The auditor team verified the parameters, data source, measurement procedures, frequency of monitoring, and QA / QC procedures. The requirements for monitoring changes in carbon stocks were correctly applied. The calculator sheets were recalculated to confirm that the parameters were used adequately. The selected monitoring frequency of the parameters is consistent with the requirements of the methodology.

The project boundary was defined following the methodology and specifically for the project conditions. The information was evaluated through the Geographic Information System, and it was compared according to the official information. Information has been appropriately managed.

In consequence, the auditor team considers that the designed Monitoring Plan is adequate to ensure that removals resulting from the project.

3.4.7 Dissemination of Monitoring Plan and Results (CL4.2)

The PD was loaded to the platform of VERRA to receive public commentaries. Through interviews with the community and project personnel, the audit team confirmed that the information of the Plan was disseminated appropriately, and the project proponents presented brochures and different visual tools for the information to be understood to the ethnic communities. With aims to obtain complementary information, ICONTEC interviewed the local governmental entities and other stakeholders.

3.5 Optional Criterion: Climate Change Adaptation Benefits

3.5.1 Regional Climate Change Scenarios (GL1.1)

Section 3.5.1 of the PD includes argues based on official information (MADS-IDEAM), the project proponent justified adequate the regional climate change, explain the variability scenarios, and identified the impacts (increase the temperature and precipitation).

The auditor team reviewed the references and secondary data and confirms the climate change scenarios in the absence of the project identified by the project proponent are appropriate.

3.5.2 Climate Change Impacts (GL1.2)

The project proponents made the coherent description of impacts according to the identified scenarios (Section 3.5.1 of the PD/3/). According to the analysis of the climate change impacts related in section 3.5.2 of the PD /3/. During the inspection site, the audit team visited several control points to verify that the monitoring plan was coherent with the impacts identified on the PD. In addition, the audit team conducted interviews with other stakeholders that confirmed the well-being of the REDD initiative.

ICONTEC agrees that the current or anticipated impacts have a direct impact on community well-being and biodiversity conservation status in the project zone and surrounding regions.

3.5.3 Measures Needed and Designed for Adaptation (GL1.3)

The audit team reviewed the PD and confirmed that it provides an appropriate analysis of the activities proposed in the project that will assist communities and biodiversity to adapt to the probable impacts of climate change. In conclusion, ICONTEC agrees with the mitigation and adaptive strategies provided in the PD are correct for the communities and biodiversity in the project zone and give compliance to the G1.8 of the CCB standard.

3.6 Community

3.6.1 Descriptions of Communities at Project Start (CM1.1)

The audit team reviewed the PD /3/ and sources used on it and confirmed it contains a comprehensive description of communities at the start of the project, including social, economic, historical, and cultural diversity within the communities. Also, the PD /3/ includes specific characteristics of each ethnic group and contains a characterization of community groups (women, youths, traditional authorities).

The audit team confirmed the information while observation on-site and interviews with the stakeholders. ICONTEC concludes that the project proponents have an exhaustive knowledge of the communities, likewise, the project has the advantage that the personnel belong to the community by ACATISEMA, and about MEDIAMOS, this proponent has full-time workers in the area from the start of the project.

3.6.2 Interactions between Communities and Community Groups (CM1.1)

Section 4.1.2 of the PD /3/ describes adequately the interactions between communities and community groups, the information is complemented in section 4.1.1. During the site visit, ICONTEC confirmed the information through interviews with ethnic community members (young, women, traditional authorities) and various stakeholders, including the Corporation for the Sustainable Development of the Amazon's North and East (CDA), the Mayor's Office of Cumaribo, and the Government of the Department of Vichada.

3.6.3 High Conservation Values (CM1.2)

The audit team reviewed the PD and respective annexes, in addition the audit team held the interviews to the community, and while it, evaluated the HCV described in PD.

The VVB is agrees with the HCV identified in section 4.1.3 of the PD.

3.6.4 Without-Project Scenario: Community (CM1.3)

The audit team cross-checking the PD with the respective annexes and confirmed that the project proponents described adequately the expected changes in the well-being conditions and characteristics of communities. Throughout the PD it corroborated that the project proponent used Theory of Change methodology and SBIA assessments, as suggested by the CCB Standards, likewise used the methodology to relate the baseline scenario (under VCS Standard previously validated). Through the interviews on-site with the community, ICONTEC confirmed the information includes in the PD is coherent, and the methodology described was the result of the in-depth consultation process.

In compliance with the assessment above, ICONTEC concludes that the expected changes to the community well-being in the without-project scenario are correctly substantiated.

3.6.5 Expected Community Impacts (CM2.1)

The audit team reviewed the PD with the respective annexes and confirmed that it included the implementation of the Sustainable Management Plan for Land and Forest (PD_VCS /26/), the applicability of the Theory of Change methodology, and SBIA assessments, which related adequately to the expected community impacts, according to community groups. Through the interviews on-site with the community, ICONTEC confirmed the information includes in the PD is consistent, and the methodology described was the result of the in-depth consultation process.

According to above, ICONTEC concludes that the expected changes to the community well-being in the with-project scenario are correctly substantiated.

3.6.6 Negative Community Impact Mitigation (CM2.2)

Section 4.2.2 of the PD /3/ adequately addresses the community impacts and measures needed to mitigate potential negative impacts on community groups. The project proponents identified the impacts without project scenarios, and another hand, the PD includes measures for the maintenance or improvement of HCV attributes related to community well-being. Through the interviews on-site, the wider community claimed to be agreed about the identified impacts and the measures to mitigate them.

ICONTEC considers that the information is adequately addressed concerning the measures that are consistent with the precautionary principle and addition, this information is coherent regarding the measures mitigate negative to the impacts on communities related to the project.

3.6.7 Net Positive Community Well-Being (CM2.3, GL1.4)

The audit team cross-checked the PD with the respective annexes, which related appropriately to the demonstration that the net impacts of the Project on the well-being of communities will be positive compared to the no-project land-use scenario. This assessment was complemented through the on-site interviews held with the community.

According to argues above, the ICONTEC concludes that the project's anticipated net well-being impacts are predicted to be positive for all identified community groups compared with their anticipated well-being conditions under the without-project land-use scenario. In consequence, the project meets the Gold Level for climate change adaptation benefits.

3.6.8 High Conservation Values Protected (CM2.4)

Through the reviewed the PD /3/ and the interviews held, the audit team confirmed that the HCVs related to community well-being will not be negatively affected by the Project, also the project proponents demonstrated that the activities and aims project are efforts towards to positively impact the community wellbeing-related HCVs.

3.6.9 Impacts on Other Stakeholders (CM3.1)

Negative impacts are not expected on other stakeholders according to section 4.3.1 of the PD. Through the reviewed the PD /3/ and the interviews held, the audit team confirmed that the project proponents adequately demonstrated the potential impacts that the project activities are likely to cause on the well-being of other stakeholders.

ICONTEC agrees the possible positive impacts related on the PD /3/.

3.6.10 Mitigation of Negative Impacts on Other Stakeholders (CM3.2)

The project proponents haven't identified the negative impacts on other stakeholders. ICONTEC compared the information contained in the PD with interviews with the ethnic groups and other stakeholders and concurs with the project proponents.

3.6.11 Net Impacts on Other Stakeholders (CM3.3)

The PD correctly describes the positive impacts of the Project Activities on the well-being of other stakeholders, the information was crosscheck on the interviews on-site. In consequence, ICONTEC agrees with the net impacts related to PD /3/.

3.6.12 Community Monitoring Plan (CM4.1, CM4.2, GL1.4, GL2.2, GL2.3, GL2.5)

Section 4.4.1 of the /PD/ presented the Community Monitoring Plan, where includes the Variables to be monitored according to the Matrix of Logic Structure (well-being community, other stakeholders) according to Social and Biodiversity Impact Assessment Manual (SBIA) and the guidelines of the Conservation Steward Program (CSP) methodology of Conservation International are used.

In addition, the project proponents include Community Monitoring Plan to achieve the Gold Level: indicators of the benefits of adaptation to climate change for communities and indicators of impacts related to women.

Through documents reviewed, and the interviews with the community and other stakeholders, ICONTEC concludes that the information provided by project proponents is enough, and the information for achieving the Gold Level is adequate.

3.6.13 Monitoring Plan Dissemination (CM4.3)

As mentioned above the project proponents demonstrated the existence of the Community Monitoring Plan, which should assessment it each future verification. The audit team confirmed that the community monitoring plan was consulted and discussed at several meets, likewise, was corroborated that it was available for public review in the Project Offices (Cumaribo, Inirida).

3.7 Optional Criterion: Exceptional Community Benefits

3.7.1 Exceptional Community Criteria (GL2.1)

The project proponents presented the indicators that provide exceptional benefits to the ACATISEMA community and in section 2.1.4 of the PD /3/ the PP present the respective social parameters. The audit team reviewed the documentation of the PD, and held the interviews with diverse stakeholders, across these activities on-site, ICONTEC can confirm that the information is clear and well-justified to apply to qualification for the Exceptional Community Benefits Gold Level.

3.7.2 Short-term and Long-term Community Benefits (GL2.2)

The project proponents present strategies (Section 2.1.8) that evidence the short-term and long-term community benefits. Through the documentation provided of the project proponents, the observation on-site, and the held interviews with stakeholders, the audit team confirms that the information is consistent, and that the short-term and long-term net benefits are adequately justified.

3.7.3 Community Participation Risks (GL2.3)

The project proponents present the mitigation measures to address the risks of participation in the community, this information was corroborated through the held interviews with diverse stakeholders and confirms that the participatory process used to identify risks is adequate and enough to meet the requirements of this indicator.

3.7.4 Marginalized and/or Vulnerable Community Groups (GL2.4)

Section 4.5.4 includes the vulnerable community groups that will gain positive net benefits and benefits access. The audit team reviewed the documentation of the PD and held interviews with diverse stakeholders to corroborate the information, so ICONTEC confirms that this information is adequate and enough to meet the requirements of this indicator.

3.7.5 Net Impacts on Women (GL2.5)

The audit team reviewed the documentation of the PD (CL3 of the preliminary findings), held the interviews with the women ethnic communities, and corroborated that the project has carried out appropriate processes for the direct participation of women. The audit team was able to determine that the information in the PD is enough for meeting the requirements of this indicator.

3.7.6 Benefit Sharing Mechanisms (GL2.6)

The audit team reviewed the documentation of the PD (CAR 1 and CAR 2 of the complementary findings), held the interviews with diverse stakeholders, and confirms that the project's benefit-sharing mechanism used complies with the requirements of GL2.6. The audit team was able to determine that the information in the PD is enough for meeting the requirements of this indicator.

On the other hand, the audit team includes the FAR1 to verify this indicator in future verifications.

3.7.7 Benefits, Costs, and Risks Communication (GL2.7)

The audit team reviewed the documentation of the PD (CAR 1 and CAR 2 of the complementary findings), held the interviews with diverse stakeholders, and confirms that the benefits, costs and risks communication described in the PD complies with the requirements of GL2.7. The audit team was able to determine that the information in the PD is enough for meeting the requirements of this indicator.

On the other hand, the audit team includes the FAR1 to verify this indicator in future verifications.

3.7.8 Governance and Implementation Structures (GL2.8)

The audit team reviewed the documentation of the PD (CAR 2 of the complementary findings), held the interviews with diverse stakeholders, and confirms that the project contains adequate governance and implementation structures that allow well-participation with the overall community. The audit team was able to determine that the information in the PD is enough for meeting the requirements of this indicator. On the other hand, the audit team includes the FAR1 to verify this indicator in future verifications.

3.7.9 Smallholders/Community Members Capacity Development (GL2.9)

Through the reviewed documentation provided to the project proponents, the observation on-site, and held interviews with diverse stakeholders, the audit team corroborated that the project conducts regular community development training. So, ICONTEC was able to determine that the information in the PD is enough for meeting the requirements of this indicator.

3.8 Biodiversity

3.8.1 Existing Conditions (B1.1)

Sections 5.1.1 and 5.4.1. (CL4 of the preliminary findings) contains complete and adequate information about the biodiversity within the project zone at the start of the project and threats to

biodiversity. The audit team corroborated the information by the reviewed documentation and interviews held with the project staff.

3.8.2 High Conservation Values (B1.2)

The audit team held the interviews to corroborate the HCV included in PD and carried out the observation on-site and reviewing documentation. Once these activities are completed, ICONTEC considers that the information provided in PD is consistent, clarify and well-justified.

3.8.3 Without-project Scenario: Biodiversity (B1.3)

The audit team reviewed the information provided by the project proponent and corroborated the information through the interviews held with the community and project staff. ICONTEC agrees with the arguments are enough and well-justified for meeting the requirements of this indicator.

3.8.4 Expected Biodiversity Changes (B2.1)

The audit team reviewed the information regarding biodiversity changes within the project zone and corroborated the information through the interviews held with the community and project staff. The audit team agrees with the changes in biodiversity caused by project activities under the 'with project' scenario in the project area during the project life cycle which is presented in section 5.2.1.

ICONTEC concludes that the project proponents provided enough an adequate information for the fulfillment of the requirement B2.1.

3.8.5 Mitigation Measures (B2.3)

The audit team held interviews with the overall community while on-site who corroborated information contained in the PD regarding biodiversity mitigation within the project zone. ICONTEC agrees that the measures were necessary and designed for the maintenance and improvement of the attributes of HCV. The audit team confirms that the information presented in section 5.2.2 is enough for meeting the requirements of this indicator.

3.8.6 Net Positive Biodiversity Impacts (B2.2, GL1.4)

The project proponents presented adequately the evidence that the project's net impacts on biodiversity will be positive compared to the without project land-use scenario, likewise, the project proponent argued coherently the contribution of project activities to achieve the adaptation of biodiversity to the probable impacts of climate change and identified likely impacts of climate change.

Cross-checking the documentation and the interviews held with the diverse stakeholders, especially with the ethnic community, the audit team corroborated the above information and concludes that the information is consistent and enough for meeting the requirements of this indicator.

3.8.7 High Conservation Values Protected (B2.4)

The project proponents presented adequately the evidence that the Biodiversity HCVs are not being adversely affected by the project. Cross-checking the documentation and the interviews held with the diverse stakeholders, the audit team agrees that the implementation of the Project, the negative effects diminish, and the very monitoring of the High Conservation Values becomes an indicator of success. However, the project proponents must broaden and deepen about the expected biodiversity changes, net positive impacts, and HCV to the Biodiversity.

ICONTEC confirms that the information is consistent and enough for meeting the requirements of this indicator.

3.8.8 Species Used (B2.5)

The project used species to the agroforestry productive activities as cocoa, banana, and corn with the objective of improving food security and strengthen production chains. Through the observation on-site and the interviews held, the audit team corroborated that these species only are used to the aims mentioned ICONTEC concludes that the PD is according to the requirements of section B2.5.

3.8.9 Impacts of Non-native Species (B2.6)

In the overall project, no exotic or non-native species are used in the project, however, the project uses domestic chicken gallus, which is not high risk as the species is used with aim of food safety. Through the observation on-site and the interviews held, the audit team corroborated the information above and considers that doesn't produce pressure on the biodiversity of the project area.

3.8.10 GMO Exclusion (B2.7)

This indicator is not applicable as no GMO's will be used to generate GHG emissions reductions or removals in the project development.

3.8.11 Inputs Justification (B2.8)

The project proponents justified the information about the Project Activities related to the use of land for agricultural production is designed based on improving traditional practices, without introducing strange elements that are not consistent with the worldview of indigenous peoples. Section 5.2.9 of the PD includes the list of some fertilizers used to a limited extent with the respective potential adverse effects. Through the observation on-site and the interviews held, the audit team corroborated the information above and considers that doesn't produce significant effects adverse, with the described frequency and quantity in the PD.

3.8.12 Waste Products (B2.9)

The audit team confirmed that the waste products have the appropriate management, and the project activities don't increase the generation of waste.

3.8.13 Negative Offsite Biodiversity Impacts (B3.1) and Mitigation Measures (B3.2)

The project proponents identified adequately the probable negative off-site impacts and mitigation measures. Through the observation on-site and the interviews held, the audit team corroborated that the mitigation measures corresponding to the requirements B3.1 and B3.2.

3.8.14 Net Offsite Biodiversity Benefits (B3.3)

The audit team is agreeing that "the project maintains biological connectivity through corridors and important habitats for the transit between ecosystems, reproduction, feeding, and the refuge of biodiversity, which at the same time guarantees the maintenance of the productivity and functionality of the forests".

The above argument is sustained with the assessment carried out the documentation, observation on-site, and the interviews held with the ethnic communities and diverse stakeholders. For that reason, ICONTEC concludes that the project demonstrates adequately that the net effect of the project on biodiversity is positive.

3.8.15 Biodiversity Monitoring Plan (B4.1, B4.2, GL1.4, GL3.4)

Section 5.4.1 present adequately the biodiversity monitoring plan to complies the project's objectives, in addition, the project proponents included the indicators for adaptation benefits for biodiversity and specified indicators for threatened species (CL4 of the preliminary findings).

Cross-checking the documentation with the observation on-site and the interviews held, the audit corroborated that the project proponents correctly made the Biodiversity Monitoring Plan and employed the Theory of change, the HCVs of biodiversity, determined the ranges of variation for the indicators and each attribute, and analyzed the criteria and the identification of the biodiversity variables.

According to the above, ICONTEC considers that the biodiversity monitoring plan provided by the project proponents complies with the requirements B4.1, B4.2, GL1.4, GL3.4. of the CCB standard.

3.8.16 Biodiversity Monitoring Plan Dissemination (B4.3)

As mentioned above the project proponents demonstrated the existence of the Biodiversity Monitoring Plan, which should assessment it each future verification. The audit team confirmed that the biodiversity monitoring plan was consulted and discussed at several meets, likewise, was corroborated that it was available for public review in the Project Offices (Cumaribo, Inirida).

3.9 Optional Criterion: Exceptional Biodiversity Benefits

3.9.1 High Biodiversity Conservation Priority Status (GL3.1)

The audit team reviewed the PD, as well as the IUCN RED List, and held the interviews to corroborate that these species have been seen in the project area. The project proponents used scientific information through biodiversity bibliography applied to the project area.

The audit team concludes that the information provided by the project proponents complies with the qualification for the Exceptional Biodiversity Benefits Gold Level.

3.9.2 Trigger Species Population Trends (GL3.2, GL3.3)

The project proponents made the adequate method to describe measures needed to enhance the population status of each trigger species in the Project Zone. The audit team reviewed the PD, as well as the IUCN RED List, and held the interviews to corroborate that these species have been seen in the project area. The information was contrasted with secondary information developed by investigation entities (Instituto Amazónico de Investigaciones Científicas Sinchi, 2009¹; Instituto de Investigación de Recursos Biológicos Alexander von Humboldt, WWF Colombia, Fundación Omacha, Fundación La Salle de Ciencias Naturales e Instituto de Estudios de la Orinoquia (Universidad Nacional de Colombia). 2010²)

The audit team concludes that the information provided by the project proponents meets the requirements of GL3.2 and GL3.3.

4 VALIDATION CONCLUSION

In conclusion, the project complies with the validation criteria for projects set out in CCB Version 3. The audit team holds no qualifications or limitations regarding the above statement.

The project is reasonably likely to achieve the estimated GHG emission reductions, although the extent to which it will do so is dependent upon the following dimensions of project performance, which have not been directly assessed at validation and which will be monitored and assessed as part of future verification engagements:

The review of the Project Description and the subsequent follow up interviews has provided ICONTEC with sufficient evidence to determine the fulfillment of the stated criteria.

ICONTEC confirms all project activities, including goals, scope and criteria, level of assurance and the PD compliance to the CCB Project Design Standards, Third Edition, as documented in this report are complete.

The optional criteria points have been evaluated. However, the criteria of the community have not developed completely, considering that the project must comply with actions planned to verify in the future (FAR 1). Therefore, ICONTEC doesn't consider that the project distinction has reached the gold level in community optional criteria in this validation, and the project should continue to implement measures to improve communication mechanisms with indigenous communities and

evaluate compliance with the duties of the indigenous authorities to achieve a Gold Level in the Community component for the next verification.

In conclusion, the project is likely to achieve the project's stated climate change adaptive capacity and resilience, community, and biodiversity benefits, as described in PD version 3, and meet all relevant CCB requirements. Further, the project achieves the distinction of the Gold Level in Climate and Biodiversity.

APPENDIX 1: FINDINGS

PRELIMINARY FINDINGS

CL No.	1	Reference	CCB Standards V.3.1. 21-06-2017 PD V.1. 30-04-2021	Date:	11/06/2021
Description of CL1					
Clarify in the PD and the Monitoring Report, the specific values of area boundaries, including the project zone. In addition, PD must show the area values of each biome.					
Project proponent response					Date: 07/11/2021
• In PDD CCB, Section “2.1.5 Project Zone Map” / Table 8, the values of area of each Project boundary (Project Area -PA-, Leakage Belt -LB-, RRD, RRL and Project Zone) were included, distributed by strata areas (defined biomes). • However, in the Monitoring Report there is no section related to this aspect, so it does not seem to be a place to include this information.					
Conclusion					Date: 16/11/2021
Proponent has properly delivered the Clarification Request.					
CL CLOSED					

CL No.	2	Reference	CCB Standards V.3.1. 21-06-2017 PD V.1. 30-04-2021	Date:	11/06/2021
Description of CL2					
Submit in the PD the location of the annexes corresponding to the Life Plans of the project reservations.					
Project proponent response					Date: 07/11/2021
• Annex 2.2.8 of validated PDD VCS is the available Life Plan that indigenous people of RIU-SM (specifically from the lower area of the Guaviare River) developed in 2007 (previous to REDD+ Project RIU-SM start date). This was the only document available about the Life Plan that the indigenous peoples of the RIU-SM had. • As part of responses to Verification findings, an Annexes were presented in “MR_RIU-SM_CCB / findings / cl1_life_plans”, which corresponds to the updated documents about Life Plans, developed within the framework of REDD+ Project RIU-SM in 2020 and 2021: - Annexes cl1.2a-e contain the Life Plan of <i>Sikuani</i> Ethnics [disaggregated in Sectors <i>Caño Cavasi</i>, <i>Aiwa-Kuna</i>, <i>Tsepajibo</i> (Zone 1), Bajo Río Vichada I and II (Zone 2) and Atana Pirariame (Zone 3)], developed in 2020.					

- Annex cl1.3 contains the document of contract that is being developed for socialization and adjust of the Life Plans of *Piapoco* and *Puinave* Ethnics, in 2021 (including that of the *Sikuani* ethnic group).
- Annex cl1.4 contains advances and processes in the formulation of Life Plan of *Piaroa* Ethnics, developed in 2021.
- Annex cl1.5 contains the schedule to develop the Life Plans, in a general way. In this document the work about Life Plans of *Cubeo* and *Curripaco* Ethnics is observed to start in January, 2022.
- Annexes cl1.6f is the draft of the Territorial Life Plan of the RIU-SM indigenous people. This Territorial Life Plan encompasses all ethnic groups present in the indigenous reservation.

Conclusion

Date: 16/11/2021

Proponent has properly delivered the Clarification Request.

CL CLOSED

CL No.	3	Reference	CCB Standards V.3.1. -GL2 21-06-2017 PD V.1. 30-04-2021 Monitoring Report V.1. 11-06-2021	Date: 11/06/2021
---------------	---	------------------	---	-------------------------

Description of CL3

Clarify in the PD and the Monitoring Report, the net positive impacts on the well-being of women and the women's participation in or influence decision making and include indicators of impacts on women in the monitoring plan. (To include specific projects).

Project proponent response

Date: 07/11/2021

- In PDD CCB, Section "4.5.5 Net Impacts on Women", a general diagnosis about the traditional conditions of women in Colombia and in the RIU-SM (as a baseline of their situation) and the indicators of impacts on women well-being / participation in or influence decision making have been compiled.

- In Monitoring Report CCB, Section "4.4.3 Net Impacts on Women", a compilation of the different elements developed in the framework of the REDD+ Project RIU-SM has been complemented, that show the women participation in decision making and in the Project Activities, and the results in benefits for this population group.

- As complementation:

- In 2020 training in handicrafts was provided to enrich the cultural identity of the indigenous communities of the Aiwa Kuna Tsepajibo Sector and generate occupation that improves the household economy. About a third of the participants were women (see Annex 6 of Monitoring Report CCB).

- In 2021 exclusive training sessions were held for 47 women about topics such as innovative entrepreneurship, business creation, technologies to enhance their value, competitiveness and job creation, among others, in order to provide conditions for their development and that of their indigenous communities (see Annex 7 of Monitoring Report CCB).

Conclusion

Date: 16/11/2021

Proponent has properly delivered the Clarification Request.

CL CLOSED

CL No.	4	Reference	CCB Standards V.3.1. -GL3 21-06-2017 PD V.1. 30-04-2021 Monitoring Report V.1. 11-06-2021	Date: 11/06/2021
Description of CL4				
Using specific indicators, clarify in the PD and de Monitoring Report, what are the impacts on the endangered species.				
Project proponent response				Date: 07/11/2021
• In PDD CCB, Section “5.4.1 Biodiversity Monitoring Plan”, the specific indicators to determine the impacts on the endangered species have been presented. • In Monitoring Report CCB 2018 & 2019, Section “5.4.1 Trigger Species Population Trends” / Results of population trends”, show the impacts on the endangered species.				
Conclusion				Date: 16/11/2021
Proponent has properly delivered the Clarification Request.

Safeguards: Mention in the DP the overlap (area and percentage) of the project with Amazon Vision and indicate relevant aspects that may affect the MATAVEN project.				
Project proponent response				Date: 07/11/2021
• In PDD CCB, Section “2.5.10 Other Programs” the area and percentage under overlap between REDD+ Project RIU-SM and Visión Amazonía Program have been presented for each project boundary. Also, in that Section, some relevant aspects that may affect to the REDD+ Project RIU-SM and its relation with the accomplish of Safeguards have been presented, as well as the request for exclusion of the Project area from the Program area, in order to resolve the overlap situation. (This issue was not included in the Monitoring Report – CCB because it is fully addressed in PDD – CCB, Section “2.5.10”).				
Conclusion				Date: 16/11/2021

Proponent has properly delivered the Corrective Action Request.

Description of CAR3				
According to the current situation for the project, is necessary to identify new external risks at the project, as:				
- Updating or change of national rules or policies - Opposition to the project by external stakeholders.				
Outline measures needed and taken to mitigate these risks.				
Project proponent response				Date: 07/11/2021
• In PDD CCB, Section “2.5.7 National and Local Laws”, the considerations related to the new external risks that are arising by the changes in the national rules or policies and by disagreement of external agents that may affect the REDD+ Project RIU-SM are presented. In the same way, some measures that can mitigate the impacts of these risks are explained.				

Conclusion	Date: 16/11/2021
Proponent has properly delivered the Corrective Action Request. CAR CLOSED	

COMPLEMENTARY FINDINGS

CAR No.	1	Reference	VCS Standard V4.1 3.4 Project Documentation	Date: 24/09/2021
Description of CAR 1				
The Project Proponents do not present the sensitive commercial information corresponding to the project's Fiducia: Bancolombia.				
Project proponent response				Date: 05/11/2021
In the execution of the Strategic Alliance Agreement (Annex 1.2.2.2 of validated PDD - VCS) signed between ACATISEMA and MEDIAMOS, in relation to the obligations in the commercial and financial part that correspond to MEDIAMOS, it is necessary to make the following clarifications, to demonstrate how the REDD+ Project RIU SM management has been carrying out the respective actions so that the "Sensitive Commercial information" is known, taking into account the limitations for security and public order reasons in the area, actions that ACATISEMA directives, the traditional authorities, the communities and members of the Indigenous reservation have agreed. The security situation and public order are known to the community in general, the control entities and the auditing entities. Regarding the management of VCU sales and the management of resources from environmental compensation, the Strategic Alliance Agreement establishes: CLAUSE NINE. - DIRECTION AND ADMINISTRATION: PARAGRAPH 2.- The functions and authorities delegated to the Project Director are: 2.2 Lead and plan the Project in all its aspects, identifying the activities to be carried out, the resources available, the deadlines and the budgeted costs. 2.3 Assign and coordinate the resources (human, technical, economic, etc.) employed in the PROJECT as described in the PDD. 2.5 Guide and define jointly with the Administrative Coordinator, the budget for the Annual Operating Plans (POAs) according to the guidelines of the Joint Commission and the PDD. 2.6 Be the authorizing officer of the expense according to the items and amounts determined in the budget of the Annual Operating Plans (POAs) 2.14 Negotiate, nationally and internationally, the VCUs, based on the definitions of the Joint Commission. MEDIAMOS F&M SAS in strict compliance with its obligations, through the Director of the REDD+ Project RIU SM, Mr. Francisco Quiroga, has been carrying out an adequate and pertinent management of the VCUs sales and the resources from VCUs sales. On these sales and budget executions a report is made periodically to the Joint Commission, of which members of ACATISEMA are part, who can approve or disapprove this exercise, or make the observations they may have, within the analysis made in the Joint Commission. The work carried out in the Joint Commission is in compliance with the principle of TRANSPARENCY, which should prevail in this class of alliances, since any member of ACATISEMA in use of constitutional				

and legal resources, can know what is debated and the work carried out in this Commission. It is important to mention that, in the management of the Alliance's resources, they are applied in accordance with the provisions of the Annual Operating Plans (POAs) and in the annual budgets that are approved by the Cabildos Board and the Coordinating Committee, of which can be inferred that the information on the management of the Project resources is widely disseminated in the community that is part of ACATISEMA.

On the other hand, it is necessary to understand the structure established by the parties for the execution of the Project (see organizational and functional structure of the REDD + RIU SM Project and ACATISEMA in particular), in relation to the management of sales information, financial information, activities planning, analysis of problems, work plans and how each part and its appendices have specific activities for the fulfillment of the purpose of the Alliance, namely:

Meetings of the Joint Commission: The Joint Commission is the entity that unites delegates from the two proponents of the REDD + RIU SM project to establish the basic guidelines for the process of preparation, validation, verification and execution of the Project. In particular, regarding the management of sales and financial information, it also has an important participation (see organizational and functional structure of the REDD+ Project RIU SM)

Strategic Alliance Agreement

CLAUSE NINE. - DIRECTION AND ADMINISTRATION

PARAGRAPH 1.- The functions and authorities delegated to the Joint Commission are:

1.2 Review, evaluate and define the adjustments of the different reports that are produced in the design and execution of the PROJECT.

1.3 Periodically evaluate the development of the activities and tasks of the PROJECT and define the adjustments that are considered convenient for the proper development of the PROJECT.

In the meetings of the Joint Commission, the development of the Project is monitored, the specific situations that may affect the Project are analyzed, the meetings that are going to take place in the Indigenous reservation are prepared (sectoral and zonal meetings, workshops, trainings and assemblies etc.) in which the respective financial and administrative reports on the status and progress of the Project must be presented.

In these meetings, a special analysis is made of the financial part of the Project, the analysis of the available resources, the budget execution, the problems in the execution processes, the VCU sales processes and the current situation regarding the new legislation and the possible changes that may occur. This can be seen reflected in the proceedings of the Joint Commission, which are 28 to date.

Each meeting that is held is accompanied by a series of documents on budget execution that allow attendees to have clarity on the commercial and financial management of the resources of the REDD + RIU SM project. As evidenced in the documents attached to each record (Annexes 1.10, 1.11, 1.13, 1.15, 1.19, 1.21 of verified Monitoring Report VCS 2018 & 2019).

The meetings of the Joint Commission are part of the preparation to present the reports to the Board of Cabildos and Coordinating Committee that is held each year. As it can be observed, the Joint Commission is an eminently operational committee, through which all the important and transcendental information of the project circulates, which later ACATISEMA has the opportunity to transmit to the *cabildos* and communities that compose it, in this way it could be said without fear of exaggerating, that

the indigenous community is the manager of its own development, since it actively participates in the execution and development of the Project, as well as in the investment of the resources that this produces.

Information to the Cabildos board and Coordinating Committee.

First, at the beginning of each year, a meeting is held with the *Cabildos* Board and the Coordinating Committee to analyze the previous year's budget execution and establish the new budget for the current year, taking into account the needs most felt by the indigenous community.

All the representatives of the sectors participate in the construction of the budget and the respective work tables are held during the three days that the meeting lasts, and they are integral participants in the management of information on the projections for the next years and the use of the resources, this can be evidenced in the minutes made (Annexes 1.1, 1.12, 1.16, 1.17, 1.18, 1.20, 1.27a of verified Monitoring Report VCS 2018 & 2019).

Second, the Representatives of the Sectors hold sectoral meetings with the captains of the communities and participate in the processes carried out in the Joint Commission, the Cabildos Board and the Coordinating Committee as specified in the Strategic Alliance agreement.

It cannot be overlooked that the Cabildos are the representatives of each sector and are elected by the captains who are the representatives of each community that is part of ACATISEMA, and thus the captains are the people closest to the bases of the indigenous communities, and it is mainly them, and on special occasions, the communities that are given direct information about the project.

CLAUSE EIGHT. of the Strategic Alliance Agreement - SPECIAL OBLIGATIONS OF ACATISEMA: 7. Inform, disseminate and publish the scope and achievements of the PROJECT to the members of the Unified Indigenous Reservation - Selva de Matavén and other communities at the national and international level.

Compliance with this obligation can be evidenced in the proceedings of sector meetings and zonal meetings, meetings in which the captains and leaders of the indigenous communities define the budget execution in order to access benefits. This is how it is guaranteed that all the communities of the Indigenous reservation and therefore all its members are participants in the benefits of the REDD+ Project RIU SM.

From a judicious reading of the proceedings concerning the zonal meetings, the sectoral meetings and the investment plans, which are carried out by ACATISEMA, it can be inferred that the projection of resources by sector comes in accordance to the established in the proceedings (Annexes 1.2 - 1.6 of verified Monitoring Report VCS 2018 & 2019).

It should be noted that MEDIAMOS has always been willing and has agreed to deliver to ACATISEMA all the financial information of the Project, in some cases its authorities have been reluctant to receive such information by printed means due to the security risk that this would entail (Joint Commission and the Legal Representative), without ignoring that any member of ACATISEMA may carry out the controls it considers pertinent through oversight bodies.

Resources from the REDD+ Project RIU SM.

As the REDD+ Project RIU SM does not have legal status and as in the Strategic Alliance Agreement it was established that the Project Director would manage the sales and receipt of the resources, Mediamos receives the resources in their checking accounts and does the respective follow-up and management of the execution of the same.

These resources rest in investment trust funds that allow them to be immediately available according to the budgetary programming.

Thus, since the second semester of 2017 to date, budget executions have been carried out, which have been programmed and with exhaustive monitoring, it has been possible to achieve the fulfillment of investments in the reserve for 4 years (2018-2021) and they are counted with resources for the next 4 years (2022-2025).

According to a schedule and taking into account the legal threats that are currently presented, it is important to mention that from 2012 to the first half of 2017 we financed all the activities of socialization, design, PDD preparation, validation, verification and registration, with own resources.

The administration of resources by a trust fund

Since 2013, negotiations have been carried out with institutions seeking both economic support and possible work in the sector that could strengthen the development of the REDD+ Project RIU SM and generate credibility in the REDD+ Project RIU SM in the communities of the Indigenous reservation, this is how the Ministry of Environment and Sustainable Development (MADS), Fundación Natura, Fondo Acción, among others, were contacted, developing work tables.

On May 16, 2014 Mediamos asked the Fondo Acción for a meeting to get to know the organization and explore the possibility of having the technical support of Fondo Acción and establish a fiduciary relationship for the REDD + RIU SM project that was being carried out with ACATISEMA (Annex 1.9.3.2.1 of validated PDD VCS) seeking transparency and reliability in the management of resources.

On May 21, 2014, an understanding agreement was signed between Fondo Acción, Mediamos and ACATISEMA for a duration of 1 year.

Around July 28, 2014, a legal process began with a protection action filed by Pedro Eliseo Roa (Annex 1.11.5 of validated PDD VCS); This process generated a delay of the Project of almost 1 year in which all the processes were suspended, it also caused a distancing with the different organizations since this protection generated conflicts and uncertainty.
(Annex 1.11 of validated PDD VCS).

Only until June 10, 2017, when ICONTEC carried out the certification of the project, was it certain that it would continue and contact was started again with financial entities that could provide the Trust service.

- Approaches were made with different financial entities and there were several reasons why it was not possible to make the agreement for the fiduciary service, which is summarized as follows:
- On the part of financial entities:
- Lack of knowledge of the type of project and of the management of these resources due to the novelty of its object of the Project in our country.
- Little credit experience from Mediamos and no financial experience from ACATISEMA

- Fear and distrust due to legal and tax consequences, since the initial resources came in dollars from accounts abroad.

On the part of Mediamos and ACATISEMA, it was concluded that it was not advisable to include a financial entity as a fiduciary since:

- In Cumaribo, where ACATISEMA's main headquarters are located, there was only a Banco Agrario presence and it did not provide this type of service.
- The costs of the transfers were too high and they were unaware of the Project activities.
- The funds held in trust have very low returns.
- The costs for the trust service were very high.

For these reasons and as in the Strategic Alliance Agreement there was no obligation to manage resources via trust, sound logic indicated that it was best to carry out financial management from Mediamos, respecting all the conditions specified in the Strategic Alliance Agreement. which is the framework agreement for the development of the REDD+ Project RIU SM.

It is also important to bear in mind that the development process of the Project during the years 2012 to 2017 left many advantages as follows:

- Mediamos knows the process and handles the Project activities very well.
- We mediate would control and deliver the resources to the accounts.
- Mediamos does not make additional charges
- Mediamos deposits the resources in trust funds that generate returns that are of additional benefit to the project and to be invested in activities within the Reservation.
- Mediamos gained trust from ACATISEMA in resources administration.

As mentioned above, this financial planning for the execution of activities that has been developed by Mediamos since 2012-2017 (with its own resources), since the second semester of 2017, has allowed to develop the Project with relative tranquility compared to the possession of resources for years to come. This is how the Verification of the years 2013, 2014 and 2015 covered costs of the years 2017, 2018 and 2019 and the costs of the previous years (2013-2016); the verification of the years 2016 and 2017 covered costs of the years 2020, 2021 and part of 2022; and the verification of the years 2018 and 2019 is expected to cover the costs of the years 2022, 2023, 2024 and 2025.

It is important to mention that the Strategic Alliance Agreement provides the main guidelines for the proper development of the project and the Joint Commission meetings allow the necessary operational adjustments to be made. Based on the dialogue of the members of the two representative institutions.

The management of financial information.

The first thing to say is that the commercial information in development of the Agreement that MEDIAMOS F&M SAS has with ACATISEMA, is of a private nature, due to the nature of the Agreement itself, due to the nature of the resources that are managed, which are not public, therefore, it is information reserved between the parties, which in any case is always available to the Colombian authorities for whatever they require from the point of view of judicial operators or administrative authorities.

It is no less important to mention, firstly, that the commercial information that is handled is sensitive and could be used by third parties (who make developments similar to ours) in this way, our know-how is legitimately protected, this means that our applied knowledge, methods and data that are necessary for the effective and practical use of the operation.

Secondly, this commercial information gives rise to financial information on the execution of the Agreement that is also sensitive, in the sense that, if this information reaches groups outside the law, whatever their nature, they could put in a security risk to MEDIAMOS personnel and to the indigenous leaders and authorities that are members of ACATISEMA. One cannot lose sight of the fact that the municipality of Cumaribo is located in the department of VICHADA, the geographical site where the REDD + RIU SM Project is developed, appears in decree 1650 of 2017 as one of the areas most affected by the armed conflict (No. 344 Dane code 99773). The foregoing motivated Mediamos and ACATISEMA to inform the communities that the resources are in fiduciary orders and this generates more security for ACATISEMA staff, field officials and entities that visit the Reservation, since gives the idea that the resources are not available for anything or subject to the whim of some person, and in this way possible kidnappings and extortion have been avoided, although to be honest there have already been difficult situations of threatening calls and with extortionate interests.

Conclusion

Date: 10/11/2021

The 2017 budget is missing, the Bancolombia trust or the relationship with the company is missing. All the annexes that are presented to support, are part of the VCS, not the CCB, so it is necessary that all these documents be attached again to this Validation.

It is necessary to mention that within the framework of the audit and as well established in the contract signed by the different parties a confidentiality agreement, where the documents that are shared within the framework of the audit will not be used for any other purpose. Likewise, it is requested to clarify all the information corresponding to the bank accounts that handle the Project's money, presenting the evidence of the payments made, the above in order to provide transparency, traceability, consistency, comparability and reliability to the information of the Project.

CAR Open

Project proponent response

Date: 26/11/2021

It is important to note that the budgets for 2018, 2019 and 2020 were designed, socialized and approved by/with the indigenous communities at all levels. Budgets respond to the project activities and the indigenous community's needs. This is a strategic axis for participation, governance, culture, and the protection of the environment and biodiversity.

The 2017 budget corresponds to activities that have been implemented since 2013, specifically on Matavén vulnerability reduction caused by external factors, development of sustainable family agri-food production systems, training programs on different subjects (environment, climate change, payments for environmental services, REDD+ projects and production systems), public and private management activities led by the project proponents, emergency support and costs associated with the Project validation and verification under the VCS standard.

Until the certification process finished (second semester of 2017), the first phases of the project were funded by MEDIAMOS and private third parties.

(Car1_0.1 presupuesto Proy REDD+ RIU SM - 2017)

in accordance with the Strategic Alliance Agreement for the Protection, Conservation and Recovery of the natural forests of the Resguardo Indígena Unificado - Selva Matavén - the project proponent MEDIAMOS had a bank account with the Colombian Bank DAVIVIENDA. Project Proponent explained the Project nature but the bank did not authorize international transfers for the VCU's sales, at the time of the Project validation. For that reason, on December 1st, 2017, MEDIAMOS opened a new bank account with BANCOLOMBIA (No. 716-857668-44). The income from the VCUs sale started been managed through this account, since it is not possible to open an account under the REDD+ RUI-SM Project because the Project does not have a legal representative. VCUs sales resulting from the verification of 2013, 2014 and 2015 began.

Later, on August 13th, 2019, MEDIAMOS opened a new bank account to exclusively manage REDD+ Project income, so that MEDIAMOS private operations were kept independent from operations involving ACTISEMA and the REDD+ Project.

(Car1_1.1 Fact Vta VCUs - 1jul17 - 31 Dic19)

For the past 4 years, the income management has been adequate, responsible and transparent, as shown in the transactions explained as follows.

To guarantee the continuity and sustainability of the Project, it was decided that income resulting from the verification of 2013, 2014 and 2015, would fund the Project operations for the second semester of 2017, 2018 and 2019. And income resulting from the verification of 2016 and 2017, would fund the Project operations for 2020, 2021 and part of 2022. This plan provides a timely cash flow for the development and implementation of the Project activities, mitigating the risks caused by factors such as a predictable legal uncertainty and the COVID pandemic, among others (see PDD CCB, Section "2.5.7 National and Local Laws").

A part of the funds in the checking's accounts were not producing profits, so it was decided to invest those funds in trust funds and securities funds with low-risk, in order to obtain additional profits and protect the Project capital. MEDIAMOS has been leading this task for the Project economic and financial benefit.

(Car1_2.1 Intereses Financieros 2017-18-19)

Find attached the certification of BANCOLOMBIA business and corporate portfolio manager with the balances as of December 31st, 2020, The details and explanation of the Project investments management.

(Car1_0.2 Certificado Bancolombia)

Some expenses of the Project income management are the following:

Bank and financial charges

This item includes all costs and expenses related to bank commissions, fees, taxes, etc., which are directly deducted from the bank account for all the transactions. These costs are evidenced in the bank statements.

(Car1_3.1 Gastos Bancarios).

Issuance costs

They correspond to payments made to VERRA for the issuance of the VCUs. These payments are made with the Project funds, before the VCUs transfer-sale.

(Car1_4.1 costos emisión 2017 – 1)

Withholding tax

This is an advance payment of income tax made by Matavén VCUs buyers.

(Car1_5.1 Retención en la Fuente)

Difference in exchange

Corresponds to the rate difference cost from USD dollars to COP Colombian pesos.

(Car1_6.1 Diferencia en cambio)

ACATISEMA Budget execution

In accordance with the Strategic Alliance Agreement, ACATISEMA executes a percentage of the funds within the Project framework. These resources are transferred from MEDIAMOS account to ACATISEMA's accounts so that ACATISEMA make direct payments. Also some payments are made directly from MEDIAMOS account to ACATISEMA's suppliers or contractors, in order to avoid paying twice for the 4 x 1000. This execution is constantly reconciled between MEDIAMOS accountant and ACATISEMA accountant to follow the annual budget.

(Car1_7.1 Ejecucion_acatisema)

Within ACATISEMA's reserves funds, there was a budget established for the construction of the Cumaribo headquarters: "Centro de Pensamiento" (Thinking Center).

(Car1_7.2 Ejecución acatisema 2018 - centro pensamiento)

MEDIAMOS Budget execution

Corresponds to MEDIAMOS operations costs for the participation/implementation of the Project activities: the team leading the technical and scientific tasks of the Project, the coordination of the implementation of activities, the VCUs sales, the information organization among other activities where MEDIAMOS invests 100% of its time.

This Budget is annually approved by the Councils Board and the Coordination Committee, as shown in the minutes.

(Car1_8.1 presupuesto_2018)

Loans and Joint ventures

Corresponds to the funds provided by private investors who contributed financing the Project before 2017 verification.

Private investors will receive profits during the life of the project. Loans were paid as soon as the Project received income from the VCUs sales resulting from 2013, 2104 and 2015 verification.

(Car1_9.1 – inversionista)

VCUs Sales

Corresponds to the funds managed by MEDIAMOS for the VCUs negotiations (brokers, other agents), management of the Project corporate image, management of public and private relationships with institutions, meetings, transportation and other activities allowing the Project to be recognized at a

national and an international level. This budget is annually approved by the Councils Board and the Coordination Committee. They are key for the Project continuity and sustainability.

(Car1_10.1 Comercialización)

Verification

Corresponds to the funds managed by MEDIAMOS for the Project's verification processes with international standards; these funds are used to coordinate all the activities for the success of the verification process, such as plot maintenance, payments to technical, field and administrative team, materials, transportation, payments to verification entities, geographic information systems, flights, hotels, food, etc.

(Car1_11.1 Verificación)

MEDIAMOS Payments

Funds for MEDIAMOS according to the Clause 11 of the Strategic Alliance Agreement. **CLAUSULA DECIMA PRIMERA. RESERVAS Y UTILIDADES. PARAGRAFO 1. Anotación 3.** "... también le corresponde un 10% del total de los ingresos para el ítem de "reservas y utilidades" que le corresponden a MEDIAMOS".

Cocoa Production Project

According to the Strategic Alliance Agreement, the Cocoa project is directly managed by MEDIAMOS, in alliance with FEDECACAO and ACATISEMA. Although in the first five-year period MEDIAMOS was responsible for 40% of the implementation, there has been an important transition in ACATISEMA implementation responsibilities, as shown in the execution reports.

The objective-commitment of this Cocoa project is to have 100 hectares of cocoa within 10 indigenous communities, train 100 families, increase participants' knowledge of the Project, boost food production and create surpluses (economic opportunities). This project is being developed and expanded on a voluntary basis and includes training and product improvement.

(Car1_13.1 Proyecto productivo Cacao)

Balance (as of Dec 31, 2019)

Corresponds to the funds that the Project had to guarantee its continuity and sustainability. These funds were part of the budget projection for 2020, 2021 and 2022.

As mentioned in the beginning, funds are carefully and efficiently managed to guarantee the Project sustainability and generate profits that can offset financial costs, issuance costs and the loss of the value of money over time. It is important to note that these funds are only invested in financial products. Investments at the end of 2019 are listed below.

(Car1_14 inversiones bancarias)

ACATISEMA Financial Statements 2017, 2018 and 2019

Financial statements issued by the accounting system show the outflow of funds and how they have been used.

(Car1_15.1 Balance de prueba)

Regarding the annexes that have been presented as evidences and supports in the CCB validation and verification processes, which are part of the VCS documents (PDD and Monitoring Reports) and that, some, have been referenced in the PDD CCB, in the Monitoring Report CCB 2018 & 2019 and in the responses to the findings, the following subfolders have been included that now contain them:

- In the folder “PDD_RIU-SM_CCB” the new subfolder “annexes_PDD-VCS_referenced_in_CCB” contains, specifically, the Project Design Document VCS and its Annexes 1, 2, 4, 6, 9, 10-19, 22-24.
- In the folder “MR_RIU-SM_CCB” the new subfolder “annexes_MRs-VCS_referenced_in_CCB” contains, in turn, two subfolders:
 - “2016_2017” containing, specifically, the Monitoring Report VCS 2016-2017 and its Annexes 2 and 9.
 - “2018_2019” containing, specifically, the Monitoring Report VCS 2018 & 2019, its Annexes 1-6, and another subfolder “calculation_tables” with files that support numerical data and calculations, especially monitoring in the file “monitoring.xlsx”.

Conclusion

Date: 15/12/2021

Information is conclusive and enough, however, it is necessary to protect the project safeguards. For this reason, this finding is closed, but it creates a FAR for followed on the next verification.

CAR CLOSED

CAR No.	2	Reference	CCB Standard V3.1 Numeral 1.3	Date: 24/09/2021
Description of CAR 2				
In order to provide transparency and effectiveness to local forest governance structures and taking into account national legislation and sovereignty, it is necessary to clarify the responsibilities and scope of the Legal Representative and General Coordinator of the ACATISEMA Coordinating Committee and explain how the monitoring of the percentage of compliance with its activities (employment contract) and the related reports are evaluated, for compliance with the REDD+ project safeguards. -				
Project proponent response				Date: 05/11/2021
Within the organizational and functional structure of both the REDD+ RIU project and ACATISEMA (PDD-CCB, Section "2.1.1 Project Proponent"), the duties and scope (functions) of the Legal Representative and General Coordinator of the ACATISEMA Coordinating Committee can be identified and clarified. The General Coordinator belongs, within the third level of hierarchy (the highest) to the management body called the Coordinating Committee (Chapter VII, Article 14 and Chapter X, Article 34 of the ACATISEMA Statutes). Therefore, as a member of the Coordinating Committee he has the 14 functions specified in Article 34; and as General Coordinator he has the 18 functions specified in Chapter XI, Article 39 of the ACATISEMA Statutes. The following functions or responsibilities should be highlighted:				

- a) To legally represent the association; a function of maximum responsibility within the Association, with all the consequences that derive from the legal framework of the country. Therefore, it has legal advisors to fully comply with this obligation.
- b) Execute all acts, contracts and operations corresponding to the purpose of the Association, in accordance with these Bylaws and its regulations; in other words, it has a highly responsible administrative function that has repercussions on the operation and efficiency of the Association.
- c) To enforce the policies outlined by the management bodies concerning the conservation and preservation of the environment of the Selva Matavén; that is, also a role of authority in the environmental aspects of the Reserve.
- d) Manage before governmental and non-governmental entities of national and international order the programs and projects; that is to say, it also has the responsibility to lead the management in the national and international environment to achieve the programs and projects of the Association.
- e) To manage and oversee all the assets of the Association; a clear and explicit obligation to manage and oversee all the assets of ACATISEMA. It complements function b).
- f) Prepare the annual budget in association with the Finance Coordinator to be presented to the Junta de Cabildos. Another specific administrative function that must take into account the Association's sources of income such as the RIU-SM REDD+ Project.
- g) Submit the activity and financial report to the General Assembly; that is to say, it is the General Assembly that must evaluate the fulfillment of its obligations and, of course, the administrative activities, based on the reports that it must prepare and submit to the Association's highest governing body.
- h) Firm Sign all documents of value that involve movement of funds in association with the Finance Coordinator, as is the case of the operation of the REDD+ RIU-SM Project; this is another administrative activity.
- i) To supervise and evaluate the development of the Association's plans and projects under its care, reporting to the General Assembly, the Board of Directors and the Coordinating Committee; another function of great care, supervision and evaluation and reporting to the Management bodies.
- j) k), l), m), n), Very specific representative and administrative actions.
- o) Coordinate in association with the Coordinator of Programs and Projects and the other thematic coordinators, all programs, projects and activities to be developed with the councils and institutions of all types that are developed within the Selva Matavén; another important function of management and administration.
- p) Manage resources, agreements and projects to support higher education studies of young people in the Matavén, as is done with the REDD+ RIU-SM Project.
- q) Any others that may be established by law and the Association in the General Assembly
- r) All agreements that are signed are socialized with the Coordinating Committee and recognized leaders; that is, they also have a communication and socialization role.

As can be observed, the duties of the General Coordinator are of the greatest responsibility and of diverse character, but also of a precise scope as indicated in the Bylaws. He/she must be a manager, manager, coordinator and communicator of the Association's activities (literals a), c), d), g), o), p), q), as well as an efficient manager (literals b), e), f), h), i), j), k), l), m), n), r).

The functions in the preparation of reports and their presentation to the other management and control entities for their respective evaluation are specific (literals f), g), i)). Therefore, it is the General Assembly, as the highest authority of the Association, who receives reports from the General Coordinator and evaluates them (literals g), i); but the reports of the General Coordinator are also received and, of course, evaluated by the Board of Councils (literal f), i)) and the Coordinating Committee (literal i).

Therefore, the scope of the General Coordinator's responsibilities is that indicated by these functions presented in the Statutes.

The evaluation of the General Coordinator's reports is carried out, first, by presenting the verbal report supported by documents before the plenary of the respective Management body; second, by opening a period of time in the respective session for questions, observations and considerations, which are answered by the General Coordinator, supported by his advisors and assistants, as well as by members of the Board of Councils and Coordinating Committee, when applicable; third, when it is determined that this space for questions and considerations is finished, if there is no proposal for a rejection hearing, the report is considered approved with the adjustments resulting from the debate that has taken place. Everything is recorded in the respective minutes, which at the end of the respective meeting are read and submitted for approval, and the minutes are signed by all attendees. Therefore, according to their customs and ancestral ways, there is no definition of a percentage of compliance with the functions or obligations of the General Coordinator, which can be derived from the presentation of their reports.

There is also an entity or organ of control of ACATISEMA represented by the Fiscal Auditor (Chap. XX, Art. 60 of the ACATISEMA Statutes). It is the supervising entity of the fulfillment of the activities and functions that correspond to the members of the Coordinating Committee and in particular to the General Coordinator as a member of this committee; it also supervises the operation of the Association in general. It is elected by the General Assembly.

The functions of the Fiscal Observer (Chap. XX, Art. 61 of the ACATISEMA Statutes) are:

- a) Request technical and financial reports on activities, projects and programs, particularly from the RIU-SM REDD+ Project and the General Coordinator. It is an obligation of the General Coordinator to submit these reports to the Fiscal Observer.
- b) Evaluate these activities, particularly those carried out by the General Coordinator. That is to say, there is then, another way of reporting and evaluation performance.
- c) Report on the activities carried out to the General Assembly.
- d) Communicate to the General Assembly and to the Meeting of Cabildos the irregularities if they exist, on the development of the Association and in particular of the General Coordinator.

ACATISEMA's statutes do not define a particular method of evaluation, so the Fiscal Observer is free to define it.

In this way, the General Coordinator has, then, two ways of reporting and evaluation, which guarantees a satisfactory control of the General Coordinator's performance.

Regarding the General Coordinator's employment contract (fixed-term employment contract 20200003) (see Annex car2.1 in the folder "car2_general_coordinator_functions") it should be explained that in Clause One, the employee (General Coordinator) is obliged: (a) To place at the service of the employer (ACATISEMA) all his normal working capacity, exclusively, in the performance of the functions proper to the aforementioned trade and the attached work (functions presented above), in accordance with the orders and instructions given to him by the employer or his representatives, and (b) not to provide directly or indirectly labor services to other employers, nor work on his own account in the same trade, during the term of this contract. The third clause is related to the worker's own activity (functions of the General Coordinator) within modalities that imply clear obligations for the worker; which is to strictly comply with

ACATISEMA's statutes for the performance of the work referred to in the contract. In conclusion, the contract requires the General Coordinator to comply with its statutory functions and in general with all the provisions of the Statutes. His specific functions and the form of evaluation of the fulfillment of his duties and related reports, which correspond precisely to the fulfillment and evaluation of the aforementioned contract, were explained above, for the reasons already mentioned.

Compliance with UNFCCC REDD+ safeguards can be explained in the following way, linking the functions of the General Coordinator already identified and explained above.

- a) The complementarity or compatibility of actions with the objectives of national forest programs and international conventions and agreements on the subject;

Several functions of the General Coordinator have current application to the development of the RIU-SM REDD+ Project (functions e), f), i), o); which, as presented in several sections of the Project's PDD, is compatible with the objectives of national forest programs and international conventions and agreements on the subject.

- b) Transparency and effectiveness of national forest governance structures, taking into account national legislation and sovereignty;

The explanation of the General Coordinator's functions within the organizational and functional structure of the RIU-SM REDD+ Project presents the transparency and effectiveness of the local forest governance structure, taking into account legislation and local sovereignty.

- c) Respect for the knowledge and rights of indigenous peoples and members of local communities, taking into consideration relevant national obligations, national circumstances and legislation and bearing in mind that the United Nations General Assembly has adopted the United Nations Declaration on the Rights of Indigenous Peoples;

The specific role of the General Coordinator of ACATISEMA, paragraph c), is explicit that in enforcing the policies outlined by the governing bodies concerning the conservation and preservation of the environment, in particular the Strategic Alliance Agreement between ACATISEMA and MEDIAMOS, there is an absolute commitment to respect the knowledge and rights of indigenous peoples and members of local communities.

- d) The full and effective participation of relevant stakeholders, in particular indigenous peoples and local communities;

Function c) related to enforcing the policies outlined by ACATISEMA's governing bodies and function f) monitoring and evaluating the development of the Association's plans and projects, in particular, the REDD+ RIU-SM Project, requires the full and effective participation of the indigenous peoples and local communities of the RIU-SM.

- e) The compatibility of the measures with forest and biodiversity conservation, ensuring that REDD+ measures are not used for the conversion of natural forests, but instead serve to incentivize the protection and conservation of these forests and the services derived from their ecosystems and to enhance other social and environmental benefits;

The function c) of the General Coordinator, to enforce the policies outlined by the governing bodies concerning the conservation and preservation of the environment and in particular the development of the RIU-SM REDD+ Project, ensuring compatibility with the conservation of natural forests, encouraging the protection and conservation of the forests of the *Selva Matavén*.

f) The adoption of measures to address the risks of reversion; g) The adoption of measures to reduce the displacement of emissions; Specifically, function d) of the General Coordinator to manage the RIU-SM REDD+ Project before governmental and non-governmental entities of national and international order, which has in its design and execution the measures to address the risks of reversion and to reduce the displacement of emissions (leakage control), makes it comply with these two safeguards.	
Conclusion	Date: 10/11/101
Attach the reports received by the fiscal auditor presented by the general coordinator and the legal representative of the Project to evidence and support everything raised in the justification text , the above in order to provide transparency, traceability, consistency, comparability and reliability to the information of the Project. CAR Open	
Project proponent response	Date: 26/11/2021
In his role as the body overseeing compliance with the activities, projects and programs developed by the members of the Coordinator Committee of ACATISEMA (and the General Coordinator, as a member of the Coordinating Committee), the Fiscal Observer accompanied by a commission and according to his own decision (instead of requesting execution reports to the authorities of the indigenous reservation and, in particular, to the General Coordinator of ACATISEMA), in such a way that he was able to evidence the actions that are executed in the RIU-SM by the authorities represented in the Coordinator Committee and, therefore, by the General Coordinator - Legal Representative of the Association. Based on these visits, the Fiscal Observer issues (through written reports) his opinions, conclusions and recommendations, including the observations he gathers from the beneficiaries in the indigenous communities. These reports are presented to the General Coordinator so that he/she is aware of the aspects and actions in which good developments and results are being achieved, as well as those in which shortcomings are occurring, in order to correct them. In the folder "car2_general_coodinator_functions" the following reports from ACATISEMA's Fiscal Observer have been included: car2.2a_fiscal_observer_report_2018.pdf: Report of Rubén Darío Robledo (December, 2018). car2.2b_fiscal_observer_report_2019.pdf: Report of Rubén Darío Robledo (August, 2019). car2.2c_fiscal_observer_report_2020.pdf: Report of Juan Rodríguez Fuentes (October, 2020). In this same direction, and in order to strengthen the implementation of the functions of ACATISEMA's Fiscal Observer, the following improvement actions are planned, which are also framed within the communication improvement plan that was explained in the response to the finding - FAR 2 of Verification (which includes training for the members of the <i>Cabildos</i> Board and the Coordinator Committee): • Special training for the Fiscal Observer on the following topics: - Indigenous governance. - Composition of the Indigenous Reservation. - Organizational structure of ACATISEMA. - ACATISEMA Statutes. - Functions of the Fiscal Overseer (Articles 60 and 61 of the ACATISEMA Statutes).	

- Functions of the Coordinating Committee (Articles 37, 39, 41, 43, 45, 48, 50, 54, 56, 58, and 60 of the ACATISEMA Statutes). - REDD+ scheme. - Requirements of the VCS and CCB standards. - Characteristics of the REDD+ Project RIU-SM. - RIU-SM REDD+ Project budget structure. - Contractual procedures. - Understanding and interpretation of accounting vouchers, books and financial documents. - Documentary management and analysis (minutes, technical reports, financial data). - Preparation and presentation of reports. • Management of resources, equipment and logistics for the fulfillment of the functions of ACATISEMA's Fiscal Observer in relation to: - Requests, formal and in writing, for reports on the fulfillment of the functions of the members of the ACATISEMA Coordinating Committee. - Transfers to different places of the RIU-SM in compliance with its function of monitoring the activities of the indigenous authorities. - Evaluation of the information gathered through technical and financial reports and tours. - Rendering of reports to the highest levels of government in the indigenous reservation and in ACATISEMA • Management to carry out actions to socialize the results obtained in the management of the Fiscal Overseer (in the annual meeting of the Board of Cabildos and Coordinating Committee and in the General Assembly).	
Conclusion	Date: 15/12/2021
Information is conclusive and enough, however, it is necessary to protect the project safeguards. For this reason, this finding is closed, but it creates a FAR for followed on the next verification. CAR CLOSED	

CAR No.	3	Reference	CCB Standard V3.1 Numeral G.1.5	Date: 04/02/2022
Description of CAR 3				
The managers of the project are presented in the evaluations within the team as Stakeholders, this must be corrected because the responsibilities, participation, and degree of commitment are very different between formulator and responsible concerning stakeholders.				
Project proponent response				Date: 12/03/2022
In the PDD-CCB, Section "2.1.6 Stakeholder Identification" the managers of the project (project proponents: the association ACATISEMA and the company MEDIAMOS F&M S.A.S.) are no longer presented as Stakeholders (in Tables 9 and 10) and no mention is made of them regarding their role in the project. The reference to these entities is presented in Section "2.1.1 Project Proponent".				

Conclusion	Date: 16/03/2022
The Project Proponents have properly delivered the Corrective Action Request. CAR CLOSED	

CAR No.	4	Reference	CCB Standard V3.1 GL1 – B2.1. - CM4.1, CM4.2, GL1.4, GL2.2, GL2.3, GL2.5	Date: 04/02/2022
----------------	---	------------------	--	-------------------------

Description of CAR 4

There are no real actions planned (goals), different from the general descriptions aimed at monitoring, surveillance, and care. No action towards increasing biomass, environmental education with specific objectives, or actions towards maintaining or promotion of fauna and flora. Information needs to be supplemented.

In addition, it is suggested to review programs that meet Sustainable Development Goals, in particular target 2 "zero hunger"; the project reports amendments of 50 Kg/ha; while experts suggest 2 to 3 tons per hectare to make productive agricultural soils in the region. The project proponent registers and lists actions towards the CVA area, however, it does not propose strategies, actions, and/or goals for these areas, the diagnosis alone does not contribute to its permanence.

Therefore, the PD should clarify the evidence that defines "Design and Goals", which raises real and supported best practices (for example, contributions in soil management to manage food security consistent with the area, this requires technical annexes).

Concerning the Community Section, it is necessary to demonstrate a baseline and targets of positive net community impacts (just structuring a working group is not enough; for example, how is governance strengthened and sustained?). It is necessary to clearly show how the actors outside the project are positively impacted.

There is a need to elaborate on the description and the action of the measures taken to mitigate the risks on the expected benefits of climate, community, and biodiversity during the lifetime of the project.

The project does not propose actions or include specific measures to ensure the maintenance or improvement of identified HVC attributes; it is suggested to review FSC and methodologies for identifying categories and suggested management schemes

Project proponent response	Date: 12/03/2022
-----------------------------------	-------------------------

About actions planned and goals to climate, community and biodiversity benefits

In addition to the activity of surveillance and control of the territory, with which the protection of the RIU-SM forests is sought, other actions are carried out that contribute to obtain benefits in the

components of Climate, Community, and Biodiversity. These actions are framed within the Sustainable Management Plan of Land and Forest of RIU-SM – SMPLF, and within the Project Activities. In the PDD-CCB, Section “2.1.8 Project Activities and Theory of Change / Planned Actions”, the specific actions and what it is expected to achieve in relation to the benefits in CCB components are supplemented.

This is how strategy 1 of SMPLF seeks to stop deforestation in the primary forest within the Project Area (1,150,212 ha.), avoiding the emission of 108,670,562 tCO₂-e during the Project's life cycle; while strategy 2 seeks to gradually reduce deforestation and degradation of primary and secondary forest in areas outside the Project Area - PA (486,211 hectares in the Leakage Belt - LB and 321,350 ha. of forest outside PA and LB), considering, however, the customary use that indigenous communities make of the natural resources of the reservation. Strategy 3 seeks to manage secondary forests (11,329 ha.) so that they become primary forests, which will even improve carbon stocks, although it is not the purpose of the REDD+ Project RIU-SM to measure increases in biomass content in land coverage other than forests.

With strategies 4, 5, and 6, actions are implemented to guarantee the food security of the communities (in relation to the SDG "zero hunger") and the develop of projects in production chains, through the improvement of management practices on the areas that are part of Familiar Agri-food Production Units System – FAPUS [which are composed of heterogeneous agricultural areas - HAA and grasslands (36,111 hectares), savannahs (318,314 hectares) and areas in natural regeneration (6,767 hectares)], rivers, and wetlands, and to even generate economic income from the possible sales of their surpluses. These actions are agroforestry, silvopastoral (including minor species) and sustainable fishing systems, which provide food (vegetables and animals) and wood products from plantations with native species.

Since 2019, the REDD+ Project RIU-SM has been implementing productive projects, including the agroforestry project for the cultivation of cocoa, corn, plantain, and *abarco* (*Cariniana pyriformis*, a native Amazonian timber forest species). The project is established in an area of 100 hectares. and involves 100 families from 10 communities, where it is expected to plant 100,000 cocoa plants, 100,000 banana plants, 850 *abarco* trees and corn for consumption and marketing. This agroforestry project also provides an increase in biomass with the planted plants.

Each productive project has contemplated the implementation of a strong educational component, providing training to the families that develop them in planting methods, care, maintenance of the crops, and even aspects of environmental sustainability.

For the development of productive projects, it is ensured that emphasis is placed on the importance of conservation and care of natural resources for their sustainability and does not affect the niches and individuals of the territory's biodiversity and that, in addition to being sustainable, they must be productive and generate what is required to cover the community needs and reduce dependence on natural resources, and that indigenous people understand that living forests and their associated fauna are more valuable than deforestation.

Actions about solidarity economy have also been planned to establish production networks and self-sufficiency of food, supplies and products. COOMATAVEN cooperative has been established, which includes to conduct training on this aspect and appropriation of this knowledge in order to establish a product collection plan for wholesale marketing, and the establishment of cooperative stores in indigenous community has been also planned, avoiding individual displacement and high fuel consumption to reach the largest population centers and return to the communities.

From the cooperative, management has been carried out with public and private institutions to establish a collection and marketing center for products that come out of the communities and supplies that cover the basic needs of families in the RIU-SM through stores and economic circuits. The cooperative will provide the services that the producers need to obtain the legal formality and participate in the market chains of natural products and foodstuffs, as well as grouping, training, and supporting the administrative, pedagogical, economic, and market requirements that the producers need.

About soil amendment and real and supported agricultural best practices

In the PDD-CCB, Section "5.2.9 Inputs Justification", an amendment of 50 Kg/ha is reported, but there was a typing error, the correct input value corresponds to 500 Kg/ha of dolomite lime for adjustment of pH values and neutralization of some toxic (or negative) elements such as aluminum, iron or manganese. Application is made according the technical instructions of FEDECACAO.

In this Section it is explained that, in general, external products to improve the quality of the soil are not used in common crops to produce food, and that soil enrichment should be achieved by natural methods. Also, the real and supported agricultural best practices are presented, in relation to technical proposals issued by the entities with which actions are being developed to improve food security and productive initiatives.

About Baseline of Community component and positive net impacts

In the PDD-CCB, Section " 4.1.4 Without-Project Scenario: Community", the baseline (in relation to conditions for RIU-SM communities in the absence of Project) is justified based on documentation and reports that describe the conditions and threats that will continue existing, and that could worsen, if this initiative is not developed. The baseline is also justified according to the unsatisfied basic needs that the population of the RIU-SM has always tried to overcome, and that could not be met if the Project is not developed.

In the PDD-CCB, Section "4.2.3 Net Positive Community Well-Being", the demonstration that the net impacts of the Project on the well-being of communities will be positive compared to the no-project land use scenario is presented, and what corresponds to its indicators has been supplemented. Also, in

the Section "4.4.1 Community Monitoring Plan", the description of the goals and indicators of the variables presented in the Matrix of Logic Structure (MLS) has been supplemented.

About positive impacts to the actors outside the project

In PDD-CCB, Section "4.3.1 Impacts on Other Stakeholders", the potential impacts that the Project Activities are likely to cause on the well-being of other stakeholders are supplemented. Some of these stakeholders are outside the project, as Government Institutions, Non-governmental institutions, and Other indigenous reservations, for which the impacts have been specified.

About measures to mitigate the risks on the expected benefits of CCB components

In the PDD-CCB, Section "2.1.12 Risks to the Project", the main risks to the expected benefits in Climate, Community and Biodiversity were identified, and the description of the actions necessary to mitigate said risks is elaborated.

About strategies, actions, and/or goals towards HCV areas, and to ensure the maintenance or improvement of these areas

In the PDD-CCB, Section "2.1.8 Project Activities and Theory of Change / Planned Actions / *Sustainable Management Plan for Land and Forest, and Strategies*", a list of actions that aim to "Mitigate the pressures and effects related to use and occupation, which impact the ecological integrity and sustainability of the HCVs, as well as the provision of ecosystem services from the RIU-SM lands and forests" (with the goals, actions proposed for these goals, the expected products and the approach of the type of selected strategy) is presented, which is part of the strategic element 7 of SMPLF, with the objective to "mitigate the pressures and effects related to use and occupation, which impact the ecological integrity and sustainability of the HCVs, as well as the provision of ecosystem services from the RIU-SM lands and forests". The Annex 2 of PDD-CCB presents the complete approaches in relation to the strategic element 7 of SMPLF, as well as the methodologies to identify HCVs attributes and management them (FSC was reviewed, but it was not found according to what was required).

In the PDD-CCB, Section "4.2.2 Negative Community Impact Mitigation", Table 55, the goals related to the measures designed for the maintenance or improvement of the HCV attributes related to community well-being are specified.

In the PDD-CCB, Section "5.4.1 Biodiversity Monitoring Plan", Tables 110 and 111, the goals related to measures designed for the maintenance or improvement of the HCVs attributes related to biodiversity are specified (including indicators and means of verification).

Conclusion	Date: 16/03/2022
-------------------	-------------------------

The proponents have properly delivered the Corrective Action Request.

CAR CLOSED

CAR No.	5	Reference	CCB Standard V3.1 CL.2.1	Date:	04/02/2022
Description of CAR 5					
The information on the benefits of climate must be expanded and detailed with respect to the calculations used in the methodology for the quantification of removals. Attach data and support analysis quantification.					
Project proponent response				Date:	12/03/2022
In the PDD-CCB, Section "3.2 Net Positive Climate Impacts" information about the benefits of climate have been expanded and detailed with respect to the calculations used in the methodology for the quantification of GHG emissions reductions. The data and support analysis quantification are explained.					
Additionally, in the PDD-CCB, Section "3.4.1 Climate Monitoring Plan" the climatic parameters that were approved in the validation process under the VCS Standard are included.					
Conclusion				Date:	16/03/2022
The proponents have properly delivered the Corrective Action Request.					
CAR CLOSED					

CAR No.	6	Reference	CCB Standard V3.1 G5.6	Date:	04/02/2022
Description of CAR 6					
The project proponent must relate the law 2111 of July 29, 2011, and the consequences that it implies to the project.					
Project proponent response				Date:	12/03/2022
In the PDD-CCB, Section "2.5.7 National and Local Laws", a reference is made to Law 2111 of 2021 and it is explained that consequences are positive and only brings benefits to the RIU-SM Project REDD+, because it provides better tools for address crimes against natural resources and the environment.					
Conclusion				Date:	16/03/2022
The proponents have properly delivered the Corrective Action Request.					
CAR CLOSED					

CAR No.	7	Reference	CCB Standard V3.1 B2.1; B2.2, GL1.4	Date:	04/02/2022
Description of CAR 7					

About Biodiversity Section, the document does indeed make a diagnosis (although not fully supported in primary and recent information), but this is short in describing the expected impacts and even more, to propose how to carry out monitoring and implementation of mitigation actions.	
The project should generate positive net impacts on biodiversity within the project area and over the lifetime of the project, measured against baseline conditions. Use appropriate methodologies to estimate changes in biodiversity.	
Project proponent response	Date: 12/03/2022
Regarding the expected impacts on biodiversity, Annex 2 of PDD-CCB expands the information describing the participatory exercise for the analysis of the sources of pressure, identifying parameters for assessing severity and scope, the indicators of each threat and the justification for measurement of each threat. Subsequently, a rating and prioritization of the threats on each HCV is carried out.	
In the analysis of pressure sources, a global value is given to each pressure source, making estimates of each parameter with respect to pressure and its pressure mitigation measure with respect to the origin or source.	
To qualify with a quantitative scale, the real sources of the pressures will be taken into account, taking into account the parameters of contribution and irreversibility.	
The qualification and weighting of these sources of pressure is obtained thanks to the consultation with experts in each subject and ecological unit and the results of the investigations that can be carried out on the natural history of the selected HCVs.	
To propose how to carry out the monitoring and implementation of mitigation actions, it is presented, in tables 12 to 18 of strategic element 7 (of Annex 2 of PDD-CCB), the synthesis of the results of the selection process of threat assessment parameters and their indicators for the pressure source.	
Conclusion	Date: 16/03/2022
The proponents have properly delivered the Corrective Action Request.

Description of CAR 8				
A clear process needs to be formalized to handle unresolved conflicts and complaints that occur during the planning and implementation of the project, the methodology suggests a third independent.				
Project proponent response				Date: 12/03/2022
The steps to be followed in the event of submitting a complaint or claim that a community member considers unresolved have been clarified. These consist of:				
• The community member presents the complaint or claim again, explaining the reasons why he/she considers that it has not been resolved and noting that he presents it in second instance.				

- The Secretary General of ACATISEMA reviews, together with the General Coordination of the Association, the unresolved complaint or claim and gives a new response to the community member.
- If the community member still considers that it has not been resolved, he can:
 - Exhaust the Statutory instances that ACATISEMA has arranged for conflict resolution, presenting the complaint or claim before the Coordinating Committee (Statutes, Art. 37, literal m) and/or the Sector Cabildo/Cabildos Board (Statutes, Art. 29, literal h) and wait for these bodies of the Association to meet regularly to address the complaint or claim and present the response.
 - Submit the complaint or claim before the national legal entities and, if he/she considers that it is not resolved in the first instance, submit the respective appeals for reversal until to obtain the final response from the highest legal entity.

Following diagram has the processes, among others, to handle unresolved complaints and claims that occur in the implementation of the REDD+ Project RIU-SM.
